Nasa A History Of The U S Civil Space Program:

NASA Roger D. Launius,1994 When future generations review the history of the twentieth century they will undoubtedly judge humanity s movement into space space with both machines and people as one of its seminal developments Even at this juncture the complex nature of spaceflight and the activity that it has engendered on the part of many peoples and governments makes the U S civil space program a significant area of investigation People from form all avenues of experience and levels of education share an interest in the drama of spaceflight This book is the most up to date synthesis of the American civil space program available and the only one designed especially for use as a college textbook Written by NASA s chief historian itit describes the history of this effort from its earliest origins to the early 1990s and offers a powerful analysis of the space program that merges political economic technological scientific and foreign affairs into a meaningful whole As in all the Anvil Series texts it has both a sound historical narrative and a set of key documents which suggest other aspects of the story **Exploring the Unknown** ,1995 **Exploring the Unknown** Roger D. Launius,Dwayne A.

Day,1996 Coming after the successful first volume the second volume covers the important topics of NASA relations with the military foreign space agencies and NASA industry university relations Organized in a similar format as volume I this book should be very useful to students of space exploration **Exploring the Unknown** ,1995 **Exploring the Unknown -**

Selected Documents in the History of the U. S. Civil Space Program Volume I: Organizing for Exploration John Logsdon,Linda Lear,Jannelle Warren-Findley,Ray Williamson,Dwayne Day,1995-08-01 A selection of key documents in the history of the U S civil space program is presented This volume deals with organizational developments of the space program More than 200 documents are printed Each is introduced by a headnote providing context bibliographical information and background information necessary to understanding the document These are organized into four major sections each beginning with an introductory essay that keys the documents to major events in the history of the space program The NASA History Series NASA SP 4407 **NASA 50th Anniversary Proceedings: NASA's First 50 Years: Historical**

Perspectives Steven J. Dick,National Aeronautics and Space Administration,2010-07-07 On 29 July 1958 President Dwight D Eisenhower signed the National Aeronautics and Space Act creating the National Aeronautics and Space Administration NASA which became operational on 1 October of that year Over the next 50 years NASA achieved a set of spectacular feats ranging from advancing the well established field of aeronautics to pioneering the new fields of Earth and space science and human spaceflight In the midst of the geopolitical context of the Cold War 12 Americans walked on the Moon arriving in peace for all mankind Humans saw their home planet from a new perspective with unforgettable Apollo images of Earthrise and the Blue Marble as well as the pale blue dot from the edge of the solar system A flotilla of spacecraft has studied Earth while other spacecraft have probed the depths of the solar system and the universe beyond In the 1980s the evolution of aeronautics gave us the first winged human spacecraft the Space Shuttle and the International Space Station stands as a

symbol of human cooperation in space as well as a possible way station to the stars With the Apollo fire and two Space Shuttle accidents NASA has also seen the depths of tragedy In this volume a wide array of scholars turn a critical eye toward NASA's first 50 years probing an institution widely seen as the premier agency for exploration in the world carrying on a long tradition of exploration by the United States and the human species in general Fifty years after its founding NASA finds itself at a crossroads that historical perspectives can only help to illuminate

Exploring the Unknown National Aeronautics and Space Administration, John M. Logsdon, Amy Paige Snyder, Roger D. Launius, Stephen J. Garber, 2014-02-01 One of the most important developments of the twentieth century has been the movement of humanity into space with machines and people The underpinnings of that movement why it took the shape it did which individuals and organizations were involved what factors drove a particular choice of scientific objectives and technologies to be used and the political economic managerial and international contexts in which the events of the space age unfolded are all important ingredients of this epoch transition from an Earthbound to a spacefaring people This desire to understand the development of spaceflight in the U S sparked this documentary history series The extension of human activity into outer space has been accompanied by a high degree of self awareness of its historical significance Few large scale activities have been as extensively chronicled so closely to the time they actually occurred Many of those who were directly involved were quite conscious that they were making history and they kept full records of their activities Because most of the activity in outer space was carried out under government sponsorship it was accompanied by the documentary record required of public institutions and there has been a spate of official and privately written histories of most major aspects of space achievement to date There is no lack of material for those who aspire to understand the origins and evolution of U S space policies and programs This reality forms the rationale for this series Precisely because there is so

much historical material available on space matters the National Aeronautics and Space Administration decided in 1988 that it would be extremely useful to have available to scholars and the interested public a selective collection of many of the seminal documents related to the evolution of the U S civilian space program While recognizing that much space activity has taken place under the sponsorship of the Department of Defense and other national security organizations within the U S private sector and in other countries around the world NASA felt that there would be lasting value in a collection of documentary material primarily focused on the evolution of the U S government s civilian space program most of which has been carried out since 1958 under the Agency s auspices As a result the NASA History Office contracted with the Space Policy Institute of George Washington University s Elliott School of International Affairs to prepare such a collection This is the fifth volume in the documentary history series three additional ones detailing programmatic developments with respect to aspects of space science not covered in the current volume and to human spaceflight will follow The documents in this volume are presented in three major sections each covering a particular aspect of the origins evolution and execution of the U S space science program Chapter 1 deals with the origins evolution and organization of the space science program Chapter 2 deals with solar system exploration Chapter 3 deals with NASA s astronomy and astrophysics efforts Vol I covered the antecedents to the U S space program as well as the origins and evolution of U S space policy and of NASA as an institution Vol II dealt with the relations between the civilian space program of the U S and the space activities of other countries the relationship between the U S civilian and national security space and military efforts and NASA s relations with industry and academic institutions Vol III provided documents on satellite communications remote sensing and the economics of space applications Vol IV covered various forms of space transportation Future volumes will cover solar and space physics earth science and life and microgravity science and human spaceflight

NASA* ,2003 Research in NASA History Steven J. Dick,2009 As the National Aeronautics and Space Administration NASA celebrated its 50th anniversary in 2008 historians as well as scientists and engineers could look back on a record of accomplishment Much has been written about the evolution of NASA s multifaceted programs and the people who carried them out Yet much remains to be done and we hope this publication will facilitate research in this important field Page 1

Inventing the American Astronaut Matthew H. Hersch,2012-10-08 Who were the men who led America s first expeditions into space Soldiers Daredevils The public sometimes imagined them that way heroic military men and hot shot pilots without the capacity for doubt fear or worry However early astronauts were hard working and determined professionals organization men who were calm calculating and highly attuned to the politics and celebrity of the Space Race

Many would have been at home in corporate America and until the first rockets carried humans into space some seemed to be headed there. Instead they strapped themselves to missiles and blasted skyward, returning with a smile and an inspiring word for the press. From the early days of Project Mercury to the last moon landing, this lively history demystifies the American astronaut while revealing the warring personalities, raw ambition, and complex motives of the men who were the public face of the space program.
