Nasa Sp4314 Atmosphere Of Freedom Sixty Years At The Nasa Ames Research Center:

Atmosphere of Freedom: 70 Years at the NASA Ames Research Center National Aeronautics Administration, Glenn Bugos, 2013-10-31 As the NASA Ames Research Center approached its 70th anniversary in December 2009 there was interest in updating the 60th anniversary history Atmosphere of Freedom Sixty Years at the NASA Ames Research Center NASA SP 4314 Much had happened in the decade from 1999 to 2009 Ames stayed focused on its historical mission of basic research and forward thinking technologies in information technology aeronautics reentry systems space life sciences and planetary science Still the Center confronted new challenges and new programs emerged Notable was the growth of astrobiology the birth and death of nanotechnology the establishment of the NASA Research Park the LCROSS mission to the Moon and the Kepler mission to hunt for Earth sized planets Perhaps the most important challenge was NASA s Constellation program a full bore effort to create a transportation system for human spaceflight to replace the Space Shuttle and return America to the Moon Furthermore events of the most recent decade shed new light on parts of NASA Ames legacy The renewed emphasis on small spacecraft for example prompted renewed interest in Ames historical strengths in spacecraft engineering dating back to the 1960s The renewed emphasis on NASA research to resolve the common concerns of commercial space likewise prompted renewed interest in Ames work to support the information technology industry This update also allowed for a reconfiguration of the text The story here starts in 1958 when the National Advisory Committee for Aeronautics NACA of which Ames was apart was incorporated into the new National Aeronautics and Space Administration NASA The first twenty years of Ames history back to 1939 its NACA years remains relevant The NACA culture is firmly fixed with in Ames and often colored its work in the NASA years especially in its continuing efforts in aeronautics and in how it provides research support to firms and other Centers pursuing larger projects For those interested in Ames during the NACA years that story is told well in Edwin P Hartman Adventures in Research A History of the Ames Research Center 1940 1965 NASASP 4302 1970 The 60th anniversary edition of Atmosphere of Freedom was organized largely chronologically with topical areas broken into large watches of time This 70th anniversary edition begins with a history of the Center from the perspective of the Center directors there have been ten since 1958 This ties the history of Ames into its larger context of space policy and politics and addresses the impact of leadership on the history of the Center Then the chapters are organized by the subjects that persisted throughout Ames history spacecraft projects human exploration planetary sciences space life sciences information technology and aeronautical research Each of these stories has a history dating back to at least 1958 so issues of overlap in the narrative remain in that what Ames has done best is explore the fruitful interchanges of disciplines and capabilities Computational fluid dynamics for example developed from iterative advances in aerodynamics supercomputing and software development and so will be addressed in various chapters Astrobiology likewise grew along the shifting border between the space life sciences and planetary science However the larger themes relevant on its 60th anniversary remain relevant on the

70th anniversary of NASA Ames the complex and constant intermingling and convergence of people tools and ideas Ames people value the perpetual reinvention of their careers and the cross fertilization of ideas Ames stands as an extraordinary repository of high tech equipment research laboratories and facilities That physical infrastructure supports what Ames truly is a growing and evolving community of researchers and support staff who have given birth to new technologies and thus enabled the human conquest of the atmosphere and the exploration of space **Atmosphere of Freedom** Glenn E. the first time Each is introduced by a headnote providing context bibliographical information and background information necessary to understanding the document This documentary history is an essential reference for anyone interested in the history of the U S civil space program and its development over time It will serve as a valuable source both for students and scholars Additional volumes will appear later that trace space science and the programmatic developments in the history of the U S exploration of space

Stealth Peter J. Westwick, 2020 The story behind the technology that revolutionized both aeronautics and the course of history On a moonless night in January 1991 a dozen airplanes appeared in the skies over Baghdad Or rather didn't appear They arrived in the dark their black outlines cloaking them from sight More importantly their odd angular shapes which made them look like flying origami rendered them undetectable to Iraq's formidable air defenses Stealth technology developed during the decades before Desert Storm had arrived To American planners and strategists at the outset of the Cold War this seemingly ultimate way to gain ascendance over the USSR was only a question What if the United States could defend its airspace while at the same time send a plane through Soviet skies undetected A craft with such capacity would have to be essentially invisible to radar an apparently miraculous feat of physics and engineering In *Stealth* Peter Westwick unveils the process by which the impossible was achieved At heart *Stealth* is a tale of two aerospace companies Lockheed and Northrop and their fierce competition with each other and with themselves to obtain what was estimated one of the largest procurement contracts in history Westwick's book fully explores the individual and collective ingenuity and determination required to make these planes and in the process provides a fresh view of the period leading up to the end of the Soviet Union Taking into account the role of technology as well as the art and science of physics and engineering Westwick offers an engaging narrative one that immerses readers in the race to produce a weapon that some thought might save the world and which certainly changed it
