this information can be used to advantage next time the vehicle hits the track Such information is invaluable to racing engineers and managers race teams and racing data analysts in all motorsports Whether measuring the performance of a Formula One racecar or that of a road legal street car on the local drag strip the dynamics of vehicles and their drivers remain the same Identical analysis techniques apply Some race series have restricted data logging to decrease the team s running budgets In these cases it is extremely important that a maximum of information is extracted and interpreted from the hardware at hand A team that uses data more efficiently will have an edge over the competition However the ever decreasing cost of electronics makes advanced sensors and logging capabilities more accessible for everybody With this comes the risk of information overload Techniques are needed to help draw the right conclusions quickly from very large data sets In addition to updates throughout this new edition contains three new chapters one on techniques for analyzing tire performance one that provides an introduction to metric driven analysis a technique that is used throughout the book and another that explains what kind of information the data contains about the track
