Science And The Pacific War:

Science and the Pacific War Roy M. MacLeod, 1999-12-31 In 1995 the fiftieth anniversary of the end of the Second World War occasioned many reflections on the place of science and technology in the conflict That the war ended with Allied victory in the Pacific theatre inevitably focussed attention upon the Pacific region and particularly upon the Manhattan project and its outcome It was in the Pacific that Western physics and engineering gave birth to the Atomic Age However the Pacific war had also proved a testing time and a testing space for other disciplines and institutions Extreme environments and operational distances and the fundamental demands of logistics required the Allies and the Japanese to innovate many scientific and technological practices Just as medicine and botany were called upon to fight tropical diseases and insect pests so engineers anthropologists and geographers were called upon to understand local conditions and climates and to work with local peoples whose traditional lives were changed forever by the experience At the same time the war played midwife to a host of new developments not least in scientific intelligence and in chemical and biological weapons which were to acquire far greater importance after 1945

Science, History and Social Activism Garland E. Allen, Roy M. Gross,2024-05-31 Through the first half of the twentieth century emotions were a legitimate object of scientific study across a variety of

disciplines After 1945 however in the wake of Nazi irrationalism emotions became increasingly marginalized and postwar rationalism took central stage Emotion remained on the scene of scientific and popular study but largely at the fringes as a behavioral reflex or as a concern of the private sphere So why by the 1960s had the study of emotions returned to the forefront of academic investigation In *Science and Emotions after 1945* Frank Biess and Daniel M Gross chronicle the curious resurgence of emotion studies and show that it was fueled by two very different sources social movements of the 1960s and brain science A central claim of the book is that the relatively recent neuroscientific study of emotion did not initiate but instead consolidated the emotional turn by clearing the ground for multidisciplinary work on the emotions *Science and Emotions after 1945* tells the story of this shift by looking closely at scientific disciplines in which the study of emotions has featured prominently including medicine psychiatry neuroscience and the social sciences viewed in each case from a humanities perspective
