Sediment Hosted Lead-Zinc Sulphide Deposits M. Deb, Wayne David Goodfellow, 2004 The Deposit Modeling Program was founded by UNESCO IUGS with the major aim to disseminate knowledge from scientists in more developed countries to their counterparts from less developed ones A fringe benefit of this effort was the compilation of information on existing models and promotion of topical workshops in developing countries This book is the result of one such workshop that took place in Delhi and Udaipur India in December 2001 Sediment hosted Lead Zinc Sulphide Deposits compiles the work of renowned economic geologists from three continents The authors highlight the recent advances in the understanding of the temporal and tectono stratigraphic distribution of sediment hosted Pb Zn sulphide ores and processes governing their genesis The first section comprises five chapters covering some of the most important deposits of this class in Australia and Canada in detail emphasizing their genetic models It also includes a paper on the geoenvironmental model which concerns behavior before mining and resulting from mining processing and smelting The second section discusses the mineralized terranes in the state of Rajasthan northwest India which host three major sulphide deposits This reference is packed with color and black and white photographs illustrations charts and graphs making it a valuable up to date resource for any geologist or geotechnical scientist studying major mineral deposits

Mineral Deposit Research: Meeting the Global Challenge Jingwen Mao, Frank P.

Bierlein,2008-01-08 In June 1965 a small group of European economic geologists gathered in Heidelberg Germany at the invitation of Professor G C Amstutz and decided to establish the Society for Geology Applied to Mineral Deposits SGA and to start a journal to be called Mineralium Deposita The first issue of the journal came out in May 1966 and has now matured to a leading journal in economic geology The first Biennial SGA Meeting was held successfully in Nancy France in 1991 with subsequent meetings in Grenada Spain 1993 Prague Czech Republic 1995 Turku Finland 1997 London United Kingdom 1999 Krakov Poland 2001 and Athens Greece 2003 In 2002 th the SGA Council decided that its 8 Biennial Meeting in 2005 should be held in Beijing China making this the first Biennial Meeting to be convened outside th rope Significantly 2005 also marks the 40 anniversary of the SGA The decision to host this year s premier meeting in Beijing reflects the Society s successful transition from its traditional European focus to a truly global organization with 24% of SGA members situated in North America 13% in Australia and Oceania and 5% in Asia Over the last 27 years China has made dramatic progress towards political and economic reform and opening the nation to the outside world China s rapid e nomic development demands increasing amounts of minerals fuels and materials and this is currently a major driver for the global economic markets

Understanding Mineral Deposits Kula Misra,2012-12-06 Mineral deposits have supplied useful or valuable material for human consumption long before they became objects of scientific curiosity or commercial exploitation In fact the earliest human interest in rocks was probably because of the easily accessible useful e g red pigment in the form of earthy hematite or valuable e g native gold and gemstones materials they contained at places In modem times the study of mineral deposits has evolved into an applied science employing detailed field observations sophisticated laboratory techniques for additional information and computer modeling to build complex hypotheses Understanding concepts that would someday help geologists to find new mineral deposits or exploit the known ones more efficiently have always been and will continue to be at the core of any course on mineral deposits but it is a fascinating subject in its own right even for students who do not intend to be professional economic geologists I believe that a course on mineral deposits should be designed as a capstone course that illustrates a comprehensive application of concepts from many other disciplines in geology mineralogy stratigraphy and sedimentation structure and tectonics petrology geochemistry paleontology geomorphology etc This book is intended as a text for such an introductory course in economic geology primarily for senior undergraduate and graduate students in colleges and universities It should also serve as a useful information resource for professional economic geologists

Hydrothermal Mineral Deposits Franco Pirajno,2012-12-06 This book is intended primarily for exploration geologists and post graduate students attending specialist courses in mineral exploration Exploration geologists are engaged not only in the search for new mineral deposits but also in the extension and re assessment of existing ones To succeed in these tasks the exploration geologist is required to be a generalist of the Earth sciences rather than a specialist The exploration geologist needs to be familiar with most aspects of the geology of ore deposits and detailed knowledge as well as

experience play an all important role in the successful exploration for mineral commodities In order to achieve this it is essential that the exploration geologist be up to date with the latest developments in the evolution of concepts and ideas in the Earth sciences This is no easy task as thousands of publications appear every year in an ever increasing number of journals periodicals and books For this reason it is also difficult at times to locate appropriate references on a particular mineral deposit type although this problem is alleviated by the existence of large bibliographic data bases of geological records abstracts and papers on computers During my teaching to explorationists and indeed during my years of work as an explorationist the necessity of having a text dealing with the fundamental aspects of hydrothermal mineral deposits has always been compelling Metallic mineral deposits can be categorised into three great families namely 1 magmatic 2 sedimentary and residual 3 hydrothermal

Why another book about Ore Deposits There are a number of factors which motivated us to write this text and which may provide an answer to this question Firstly our colleagues are predominantly mining engineers and minerals processing technologists which provides us with a different perspective of ore deposits from many academic geologists Secondly we have found that most existing texts are either highly theoretical or merely descriptive we have attempted to examine the practical implications of the geological setting and genetic models of particular ore deposit types We have written the text primarily for undergraduates who are taking options in Economic Geology towards the end of a Degree Course in Geology However we hope that the text will also prove valuable to geologists working in the mining industry The text is to a large extent based on a review of the existing literature up to the end of 1984 However we have visited most of the mining districts cited in the text and have also corresponded extensively with geologists to extend our knowledge beyond the published literature Nonetheless writing a text book on Ore Deposits is a demanding task and it is inevitable that sins of both omission and commission have been committed We would therefore welcome comments from readers which can be incorporated in future editions RICHARD EDWARDS KEITH ATKINSON Cmnhome School n 1ilcs April 1985
