Sari,1987 Geology in Petroleum Production A.J. Dikkers,1985-11-01 A practical book for geologists involved in petroleum production here is a comprehensive review of basic techniques in production geology the links with related subjects and the function of geologists in the planning and operation of all phases of oilfield development The first part discusses the basic techniques used in the analysis and graphic representation of the stratigraphy tectonic structure reservoir sedimentology and hydrocarbon distribution of an oilfield The second part describes how this knowledge is applied in the various phases of field development The mutual support between production geology and neighbouring disciplines such as seismology log interpretation reservoir engineering is stressed Throughout the book the text is secondary to the illustrations these are examples mostly hypothetical of conditions and techniques discussed designed so as to bring out as clearly as possible the importance of the points made It is thus an ideal book for graduate students specializing in petroleum geology and for participants in post graduate courses in universities or within industry

Deep-Water Processes and Facies Models: Implications for Sandstone Petroleum Reservoirs G. Shanmugam,2006-03-31 This rock based book is an attempt to link deep water process sedimentology with sandstone petroleum reservoirs In presenting a consistent process interpretation the author has relied on his description and interpretation of core and outcrop 1 20 to 1 50 scale from 35 case studies which include 32 petroleum reservoirs totaling more than 30 000 feet 9 145 m carried out during the past 30 years 1974 2004 This book should serve as an important source of information for students on history methodology first principles advanced concepts controversies and practical applications on deep water sedimentology and petroleum geology Discusses the link between deep water process sedimentology and petroleum geology Addresses criteria for recognizing deposits of gravity driven thermohaline driven wind driven and tide driven processes in deep water environments Provides head on approach to resolve controversial process related problems *Recent Research on Sedimentology, Stratigraphy, Paleontology, Tectonics, Geochemistry, Volcanology and Petroleum Geology* Attila Çiner,Santanu Banerjee,Federico Lucci,Ahmed E. Sedimentary Petrology Maurice E. Tucker, Stuart J. Jones, 2023-04-10 Authoritative accessible and updated introduction to sedimentary rocks for undergraduate students Sedimentary Petrology provides readers with a concise account of sedimentary rock composition mineralogy texture structure diagenesis and depositional environments The new edition of this classic text incorporates the many technological and analytical advances of the last decade revealing exciting details of processes such as microbial precipitation how microporosity is created within mudrocks and the chemical composition of foraminifera deposits which can be a key indicator for changing seawater temperature This fourth edition offers a comprehensive update and expansion of the previous editions with a new set of illustrations new references and further reading The new co author Stuart Jones has brought his considerable expertise in clastic sedimentology to the rewritten chapters on sandstones and mudrocks The addition of color images throughout the text will aid students immensely in their studies and petrographic fieldwork Sample topics covered in Sedimentary Petrology include Advances in modeling and programming to simulate depositional diagenetic conditions and controls which support field lab descriptions and interpretations Ocean acidification and the demise of coral reefs and the role of the oceans in carbon capture and storage Sedimentary ironstones and iron formations sedimentary phosphate deposits coal oil shale and petroleum and cherts and siliceous sediments Limestones evaporites volcanoclastic sediments sandstones conglomerates breccias and the effects of microplastics on marine organisms Aimed at undergraduates in geology and earth science Sedimentary Petrology is an excellent teaching and learning resource for introductory courses in sedimentary rocks

Sedimentary Cover of the Craton in Canada D.F. Stott, J.D. Aitken, 1993 The early chapters of the volume present data and interpretations of the geophysics of the craton and summarise with

sequential maps the tectonic evolution of the craton The main body of the text and accompanying plates and figures present the stratigraphy structural history and economic geology of specific sedimentary basins and regions The volume concludes with a summary chapter in which the currently popular theories of cratonic tectonics are discussed and the unresolved questions are identified

The Geology of Fluvial Deposits Andrew D. Miall, 2013-12-20 Fluvial deposits represent the preserved record of one of the major nonmarine environments They accumulate in large and small intermontane valleys in the broad valleys of trunk rivers in the wedges of alluvial fans flanking areas of uplift in the outwash plains fronting melting glaciers and in coastal plains The nature of alluvial assemblages their lithofacies composition vertical stratigraphic record and architecture reflect an interplay of many processes from the wandering of individual channels across a floodplain to the long term effects of uplift and subsidence Fluvial deposits are a sensitive indicator of tectonic processes and also carry subtle signatures of the climate at the time of deposition They are the hosts for many petroleum and mineral deposits This book is about all these subjects The first part of the book following a historical introduction constructs the stratigraphic framework of fluvial deposits step by step starting with lithofacies combining these into architectural elements and other facies associations and then showing how these in turn combine to represent distinctive fluvial styles Next the discussion turns to problems of correlation and the building of large scale stratigraphic frameworks These basin scale constructions form the basis for a discussion of causes and processes including autogenic processes of channel shifting and cyclicity and the larger questions of allogenic tectonic eustatic and climatic sedimentary controls and the development of our ideas about nonmarine sequence stratigraphy
