The Geospatial Web Arno Scharl, Klaus Tochtermann, 2009-02-28 The most important attribute of geospatial platforms is their unique potential to aggregate a multitude of public and private geographic data sets providing access to data from government agencies industry and the general public NASA and other organizations have a wealth of planetary science data representing the output from thousands of satellites in earth orbit and from dozens of costly missions to other planets Benefits derived from both the data and visual interfaces to access the data represent a significant return on investment for the public Integrating geospatial data with semantic and collaborative Web technology multiplies the public benefits and represents the main focus of this book The user interfaces of geobrowsers are designed for the layperson giving convenient access to all kinds of geographically referenced information Geobrowsers hide the technical details related to finding accessing and retrieving such information The daunting challenge of the Geospatial Web is to seamlessly integrate and display vastly different information modes Nowadays it is not enough to simply display a map of some region additional dynamic information modes need to be displayed and put into context from weather sensor readings and live aerial video feeds to daily news updates photo collections and video archives

Community Seed Banks Ronnie Vernooy, Pitambar Shrestha, Bhuwon Sthapit, 2015-05-15 Community seed banks first appeared towards the end of the 1980s established with the support of international and national non governmental organizations This book is the first to provide a global review of their development and includes a wide range of case studies Countries that pioneered various types of community seed banks include Bangladesh Brazil Ethiopia India Nepal Nicaragua the Philippines and Zimbabwe In the North a particular type of community seed bank emerged known as a seed savers network Such networks were first established in Australia Canada the UK and the USA before spreading to other countries Over time the number and diversity of seed banks has grown In Nepal for example there are now more than 100 self described community seed banks whose functions range from pure conservation to commercial seed production In Brazil community seed banks operate in various regions of the country Surprisingly despite 25 years of history and the rapid growth in number organizational diversity and geographical coverage of community seed banks recognition of their roles and contributions has remained scanty The book reviews their history evolution experiences successes and failures and reasons why challenges and prospects It fills a significant gap in the literature on agricultural biodiversity and conservation and their contribution to food sovereignty and
