India and LNCS Volume 2390 GREC 2001 in Kingston Canada Graphics recognition is a particular field in the domain of

document analysis that combines pattern recognition and image processing techniques for the analysis of any kind of

graphical information in documents either from paper or electronic formats Topics of interest for the graphics recognition

community are vectorization symbol recognition analysis of graphic documents with a grammatic notation like electrical

diagrams architectural plans engineering drawings musical scores maps etc graphics based information retrieval performance

evaluation in graphics recognition and systems for graphics recognition In addition to the classic objectives

in recent years graphics recognition has faced up to new and promising perspectives some of them in conjunction with other

scientific communities Examples of that are sketchy interfaces and on line graphics recognition in the framework of human

computer interaction or query by graphic content for retrieval and browsing in large format graphic documents digital

libraries and Web applications Thus the combination of classic challenges with new research interests gives the graphics

recognition field an active scientific community with a promising future **Document Analysis Systems VI** Simone

Marinai, Andreas Dengel, 2004-12-10 This volume contains papers selected for presentation at the 6th IAPR Workshop on Document

Analysis Systems DAS 2004 held during September 8 10 2004 at the University of Florence Italy Several papers represent

the state of the art in a broad range of traditional topics such as layout analysis applications to graphics recognition and

handwritten documents Other contributions address the description of complete working systems which is one of the

strengths of this workshop Some papers extend the application domains to other media like the processing of Internet

documents The peculiarity of this 6th workshop was the large number of papers related to digital libraries and to the

processing of historical documents a task which frequently requires the analysis of color documents A total of 17 papers are

associated with these topics whereas two years ago in DAS 2002 only a couple of papers dealt with these problems In our view there are three main reasons for this new wave in the DAS community From the scientific point of view several research fields reached a thorough knowledge of techniques and problems that can be effectively solved and this expertise can now be applied to new domains Another incentive has been provided by several research projects funded by the EC and the NSF on topics related to digital libraries
