Selected Papers, 1945-1980, with Commentary Chen Ning Yang, 2005 A remarkable personal and professional chronicle by one of today's leading physicists this is a collection of Chen Ning Yang's personally selected papers supplemented by his insightful commentaries Including previously unpublished or hard to find works this volume contains Yang's important papers on statistical physics nuclear forces and particle physics Among them are his seminal work with T D

Lee on the nonconservation of parity for which they won the Nobel Prize and his work with R L Mills which led to modern gauge theories with their exciting prospects for the broad unification of field theories The commentaries were written especially for this volume and provide a fascinating account of Yang s development as a physicist as well as a look at many important physicists of the 20th century They trace the development of Yang s interests and ideas from his graduate school days to the present showing how he worked with his colleagues and how their physics came into being Together the papers and commentaries in this unique collection comprise a powerful personal statement shedding light on both the intellectual development of a great physicist and on the nature of scientific inquiry

Fundamental Principles Of Classical Mechanics: A Geometrical Perspective Kai S Lam, 2014-07-07 This book is written with the belief that classical mechanics as a theoretical discipline possesses an inherent beauty depth and richness that far transcends its immediate applications in mechanical systems These properties are manifested by and large through the coherence and elegance of the mathematical structure underlying the discipline and are eminently worthy of being communicated to physics students at the earliest stage possible This volume is therefore addressed mainly to advanced undergraduate and beginning graduate physics students who are interested in the application of modern mathematical methods in classical mechanics in particular those derived from the fields of topology and differential geometry and also to the occasional mathematics student who is interested in important physics applications of these areas of mathematics Its main purpose is to offer an introductory and broad glimpse of the majestic edifice of the mathematical theory of classical dynamics not only in the time honored analytical tradition of Newton Laplace Lagrange Hamilton Jacobi and Whittaker but also the more topological geometrical one established by Poincare and enriched by Birkhoff Lyapunov Smale Siegel Kolmogorov Arnold and Moser as well as many others

Selected Papers II, with Commentaries Chen Ning Yang, 2013 This book is a collection of Professor Chen Ning Yang s personally selected papers 1971 2012 supplemented by his commentaries Its contents reflect the professor s changing interests after he reached age sixty

and commentaries in this unique collection comprise a remarkable personal and professional chronicle shedding light on both the intellectual development of a great physicist and on the nature of scientific inquiry

Finsler Geometry David Dai-Wai Bao, Shiing-Shen Chern, Zhongmin Shen, 1996 This volume features proceedings from the 1995 Joint Summer Research Conference on Finsler Geometry chaired by S S Chern and co chaired by D Bao and Z Shen The editors of this volume have provided comprehensive and informative capsules of presentations and technical reports This was facilitated by classifying the papers into the following 6 separate sections 3 of which are applied and 3 are pure Finsler Geometry over the reals Complex Finsler geometry Generalized Finsler metrics Applications to biology engineering and physics Applications to control theory Applications to relativistic field theory Each section contains a preface that provides a coherent overview of the topic and includes an outline of the current directions of research and new perspectives A short list of open problems concludes each contributed paper A number of photos are featured in the volumes for example that of Finsler In addition conference participants are also highlighted

Topics In Contemporary Mathematical Physics (Second Edition) Kai S Lam, 2015-09-17 This new second edition contains a general treatment of quantum field theory QFT in a simple scalar field setting in addition to the modern material on the applications of differential geometry and topology group theory and the theory of linear operators to physics found in the first edition All these are introduced without assuming more background on the part of the reader than a good foundation in undergraduate junior level mathematical physics The new material entirely focuses on an introduction to quantum field theory emphasizing the Feynman path functional integral approach to QFT and the renormalization group With respect to the latter the focus is on an introduction of its application to critical phenomena in statistical physics following the outgrowth of the Callan Symanzik equation originally developed in the context of high energy physics and the seminal contributions of Kenneth Wilson One of the overriding aims of the new material is also to draw students attention to the deep connections between high energy physics and statistical mechanics The unavoidable technical aspects are explained with a minimum of prerequisite material and jargon and conceptual understanding is always given prominence before mastery of technical details but the importance of the latter is never underestimated Derivational details and motivational discussions are provided in abundance in order to ensure continuity of reading and to avoid trying the readers patience

Selected Papers of Chuan-Chih Hsiung Chuan-Chih Hsiung, 2001 This invaluable book contains selected papers of Prof Chuan Chih Hsiung renowned mathematician in differential geometry and founder and editor in chief of a unique international journal in this field the Journal of Differential Geometry During the period of 1935-1943 Prof Hsiung was in China working on projective differential geometry under Prof Buchin Su In 1946 he went to the United States where he gradually shifted to global problems Altogether Prof Hsiung has published about 100 research papers from which he has selected 64 in chronological order for this volume Contents Projective Differential Geometry of a Pair of Plane Curves A Projective Invariant of a Certain Pair of Surfaces Affine Invariants of a Pair of

Hypersurfaces A Theorem on Surfaces with a Closed Boundary Some Uniqueness Theorem on Riemannian Manifolds with Boundary On the Group of Conformal Transformations of a Compact Riemannian Manifold Minimal Immersions in Riemannian Spheres A Remark on Pinched Manifolds with Boundary Nonexistence of a Complex Structure on the Six Sphere Some Conditions for a Complex Structure and other papers Readership Researchers in differential geometry *Topics in Contemporary Mathematical Physics* Kai Shue Lam, 2003 This textbook pitched at the advanced undergraduate to beginning graduate level focuses on mathematical topics of relevance in contemporary physics that are not usually covered in texts at the same level Its main purpose is to help students appreciate and take advantage of the modern trend of very productive symbiosis between physics and mathematics Three major areas are covered 1 linear operators 2 group representations and Lie algebra representations and 3 topology and differential geometry The features of this work include an exposition style which is a fusion of those common in the standard physics and mathematics literatures a level of exposition that varies from quite elementary to moderately advanced so that the text should be of interest to a wide audience a strong degree of thematic unity despite the diversity of the topics covered and cross references so that from any part of the book the reader can trace easily where specific concepts or techniques are introduced Revue Roumaine de Mathématiques Pures Et Appliquées, 1994 *Complex Geometry and Lie Theory* James A. Carlson, Charles Herbert Clemens, David R. Morrison, 1991 In the late 1960s and early 1970s Phillip Griffiths and his collaborators undertook a study of period mappings and variation of Hodge structure The motivating problems which centered on the understanding of algebraic varieties and the algebraic cycles on them came from algebraic geometry However the techniques used were transcendental in nature drawing heavily on both Lie theory and hermitian differential geometry Promising approaches were formulated to fundamental questions in the theory of algebraic curves moduli theory and the deep interaction between Hodge theory and algebraic cycles Rapid progress on many fronts was made in the 1970s and 1980s including the discovery of important connections to other fields including Nevanlinna theory integrable systems rational homotopy theory harmonic mappings intersection cohomology and superstring theory This volume contains thirteen papers presented during the Symposium on Complex Geometry and Lie Theory held in Sundance Utah in May 1989 The symposium was designed to review twenty years of interaction between these two fields concentrating on their links with Hodge theory The organizers felt that the time was right to examine once again the large issues of understanding the moduli and cycle theory of higher dimensional varieties which was the starting point of these developments The breadth of this collection of papers indicates the continuing growth and vitality of this area of research Several survey papers are included which should make the book a valuable resource for graduate students and other researchers who wish to learn about the field With contributions from some of the field's top researchers this volume testifies to the breadth and vitality of this area of research **Selected Papers II** Shiing-Shen Chern, 1989-08-08 In recognition of professor Shiing Shen Chern's long and distinguished service to mathematics and to the University of California the

geometers at Berkeley held an International Symposium in Global Analysis and Global Geometry in his honor in June 1979. The output of this Symposium was published in a series of three separate volumes comprising approximately a third of Professor Chern's total publications up to 1979. Later a fourth volume was published focusing on papers written during the Eighties. This second volume comprises selected papers written between 1932 and 1965.
