The Canadian Teacher ... Gideon E. Henderson, Matthew Parkinson, 1919 **A Design for a School of Pedagogy** Bunnie Othanel Smith, 1980 **Teaching Practices from America's Best Urban Schools** Joseph F. Johnson, Jr., Cynthia L. Uline, Lynne G. Perez, 2013-08-16 Discover the teaching practices that make the biggest difference in student performance This practical research based book gives principals teachers and school administrators a direct inside look at instructional practices from top award winning urban schools The authors provide detailed examples and analyses of these practices and successfully demystify the achievement of these schools They offer practical guides to help educators apply these successful practices in their own schools Teaching Practices from America's Best Urban Schools will be a valuable tool for any educator in both urban and non urban schools schools that serve diverse student populations including English language learners and children from low income families **New Directions In Educational Evaluation** Ernest R. House, 2013-10-28 First published in 1986 Measuring the outcomes of educational practices is a modern phenomenon Valuing their worth is as old as philosophy itself It is the singular value of this collection of papers set in context and introduced by Ernest House that it holds in dynamic equilibrium both the measurement and the valuing sides of educational evaluation **The Lever of Riches** Joel Mokyr, 1992-04-09 In a world of supercomputers genetic engineering and fiber optics technological creativity is ever more the key to economic success But why are some nations more creative than others and why do some highly innovative societies such as ancient China or Britain in the industrial revolution pass into stagnation Beginning with a fascinating concise history of technological progress Mokyr sets the background for his analysis by tracing the major inventions and innovations that have transformed society since ancient Greece and Rome What emerges from this survey is often surprising the classical world for instance was largely barren of new technology the relatively backward society of medieval Europe bristled with inventions and the period between the Reformation and the Industrial Revolution was one of slow and unspectacular progress in technology despite the tumultuous developments associated with the Voyages of Discovery and the Scientific Revolution What were the causes of technological creativity Mokyr distinguishes between the relationship of inventors and their physical environment which determined their willingness to challenge nature and the social environment which determined the openness to new ideas He discusses a long list of such factors showing how they interact to help or hinder a nation's creativity and then illustrates them by a number of detailed comparative studies examining the differences between Europe and China between classical antiquity and medieval Europe and between Britain and the rest of Europe during the industrial revolution He examines such aspects as the role of the state the Chinese gave up a millennium wide lead in shipping to the Europeans for example when an Emperor banned large ocean going vessels the impact of science as well as religion politics and even nutrition He questions the importance of such commonly cited factors as the spill over benefits of war the abundance of natural resources life expectancy and labor costs Today an ever greater
