Hemminga, Carlos M. Duarte, 2000-10-19 Seagrasses occur in coastal zones throughout the world in the part of the marine habitat that is most heavily influenced by humans Decisions about coastal management therefore often involve seagrasses but a full appreciation of the role of seagrasses in coastal ecosystems has yet to be reached This book provides an entry point for those wishing to learn about the ecology of this fascinating group of plants and gives a broad overview of current knowledge complemented by extensive literature references to guide the reader to more detailed studies **Terrestrial Global Productivity** Jacques Roy, Bernard Saugier, Harold A. Flowering Plants. Monocotyledons Klaus Kubitzki, 2013-04-17 When Rolf Dahlgren and I embarked on preparing this book series Rolf took prime responsibility for monocotyledons which had interested him for a long time After finishing his comparative study and family classification of the monocots he devoted much energy to the acquisition and editing of family treatments for the present series After his untimely death Peter Goldblatt who had worked with him continued to handle further incoming monocot manuscripts until in the early 1990s his other obligations no longer allowed him to continue At that time some 30 manuscripts in various states of perfection had accumulated which seemed to form a solid basis for a speedy completion of the FGVP monocots with the exception of the grasses and orchids which would appear in separate volumes I felt a strong obligation to do everything to help in publishing the manuscripts that had been put into our hands I finally decided to take charge of them personally although during my life as a botanist I had never seriously been interested in monocots **Annual Plant Reviews, Cell Cycle Control and Plant Development** Dirk Inzé, 2007-06-25 The cell cycle

in plants consists of an ordered set of events including DNA replication and mitosis that culminates in cell division As cell division is a fundamental part of a plant's existence and the basis for tissue repair development and growth a full understanding of all aspects of this process is of pivotal importance Cell Cycle Control and Plant Development commences with an introductory chapter and is broadly divided into two parts Part 1 details the basic cell machinery with chapters covering cyclin dependent kinases CDKs cyclins CDK inhibitors proteolysis CDK phosphorylation and E2F DP transcription factors Part 2 which describes the cell cycle and plant development covers cell cycle activation cell cycle control during leaf development endoreduplication the cell cycle and trichome fruit and endosperm development the hormonal control of cell division and environmental stress and cell cycle exit The editor of this important book Professor Dirk Inzé well known and respected internationally has brought together an impressive team of contributing authors providing an excellent new
