Excerpt chemistry the experiment stations and laboratories established now by the governments of every civilized country So great a number of trained scientific workers whose entire time can be given to experiments and to researches must bring about a great increase of knowledge in this very difficult field of work

PHYSIOLOGICAL CHEMISTRY The study from a chemical standpoint of the substances and processes in the animal body presents even greater difficulties and complexities than the similar study of plants These two lines of study have been in a measure mutually helpful At first the same chemists were often engaged in both as de Saussure Chevreul Liebig and others They have now become very distinct and separate fields of research The Problems to be solved In order to lay a foundation for physiological chemistry it has been necessary first to have some knowledge of the multitudinous substances occurring in animal bodies and if possible to learn the conditions under which these different bodies were formed Several stumblingblocks present themselves here The delicacy and instability of many of these compounds the possibility that their extraction from the living organism or the killing of the organism might cause radical changes in them and the extreme complexity and probable size of the molecules which render it difficult to decide between the several possible formulas derived by analyses

are among the problems to be faced Because of the last mentioned difficulty some of the most important substances occurring in animals have still no certain formula assigned them Furthermore there have of course been serious difficulties in the way of separation and purification Condition of the Science It is therefore not **A Short History of Chemistry** Francis Preston Venable,1901 A Short History of Chemistry Francis Preston Venable,1906 **A short history of chemistry** Isaac Asimov,1965 A Short History of Chemistry F. valuable book *A Short History of Science and Scientific Thought* Frank Sherwood Taylor, 1949 **A Short History of the Drug Receptor Concept** C. Prüll, A. Maehle, R. Halliwell, 2009-06-25 The concept of specific receptors for drugs hormones and transmitters lies at the very heart of biomedicine This book is the first to consider the idea from its 19th century origins in the work of John Newport Langley and Paul Ehrlich to its development of during the 20th century and its current impact on drug discovery in the 21st century **A Brief History of Chemistry** Edited by: Kisak, 2015-11-03 The history of chemistry represents a time span from ancient history to the present By 1000 BC civilizations used technologies that would eventually form the basis to the various branches of chemistry Examples include extracting metals from ores making pottery and glazes fermenting beer and wine extracting chemicals from plants for medicine and perfume rendering fat into soap making glass and making alloys like bronze The protoscience of chemistry alchemy was unsuccessful in explaining the nature of matter and its transformations However by performing experiments and recording the results alchemists set the stage for modern chemistry The distinction began to emerge when a clear differentiation was made between chemistry and alchemy by Robert Boyle in his work *The Sceptical Chymist* 1661 While both alchemy and chemistry are concerned with matter and its transformations chemists are seen as applying scientific method to their work Chemistry is considered to have become an established science with the work of Antoine Lavoisier who developed a law of conservation of mass that demanded careful measurement and quantitative observations of chemical phenomena The history of chemistry is also intertwined with the history of thermodynamics This book gives a comprehensive current overview on the history of the science of chemistry
