A. Barnett, 1988 Biology and Freedom first published in 1989 is an essay on human nature an attempt to make a just assessment of a species often presented as predominantly and unavoidably violent grasping selfish and stupid Likening human beings to animals is a traditional method of influencing attitudes on morals and politics But in this book Professor Barnett shows that modern

ethology experimental psychology genetics and evolutionary theory give the now fashionable misanthropy no authentic support In doing so he asks whether the theory of evolution has any bearing on Machiavellianism in politics or the concept of original sin and whether laboratory experiments on the effects of reward and punishment tell us anything about the enigma of free will Combining the findings of biology with logic and humour Professor Barnett gives a lucid alternative portrait of humanity in which he stresses the questions that the complexities of human existence will raise long after current myths have faded This book is for all interested in human nature and the future of human society *Handbook of Flowering* Abraham H. Halevy, 2018-01-18 These volumes are an exhaustive source of information on the control and regulation of flowering They present data on the factors controlling flower induction and how they may be affected by climate and chemical treatments For each plant specific information is provided on all aspects of flower development including sex expression requirements for flowering initiation and development photoperiod light density vernalization and other temperature effects and interactions Individual species are described from the standpoint of juvenility and maturation morphology induction and morphogenesis to anthesis All information is presented alphabetically for easy reference
