Maurer, 2021-06-15 There should no longer be any doubt drones are here to stay In civil society they are used for rescue surveillance transport and leisure And on the battlefield their promises of remote protection and surgical precision have radically changed the way wars are fought But what impact are drones having on our identity and how are they affecting the communities around us This book addresses these questions by investigating the representation of civilian and military drones in visual arts literature and architecture What emerges the contributors argue is a compelling new aesthetic drone imaginary a prism of cultural and critical knowledge through which the complex interplay between drone technology and human communities is explored and from which its historical cultural and political dimensions can be assessed The contributors offer diverse approaches to this interdisciplinary field of aesthetic drone imaginaries With essays on the aesthetic configurations of drone swarming historical perspectives on early unmanned aviation as well as current debates on how drone technology alters the human body and creates new political imaginaries this book provides new insights to the rapidly evolving field of drone studies Working across art history literature photography feminism postcolonialism and cultural studies Drone imaginaries offers a unique insight into how drones are changing our societies **Reflections of**

Our Past John H. Relethford, Deborah A. Bolnick, 2018-03-26 The rise of the multi billion dollar ancestry testing industry points to one immutable truth about us as human beings we want to know where we come from and who our ancestors were John H. Relethford and Deborah A. Bolnick explore this topic and many more in this second edition of Reflections of Our Past Where did modern humans come from and how important are the biological differences among us Are we descended from Neandertals How should we understand the connections between genetic ancestry race and identity Were Native Americans the first to inhabit the Americas Can we see evidence of the Viking invasions of Ireland a millennium ago even in the Irish of today Through engaging examination of issues such as these and using non technical language Reflections of Our Past shows how anthropologists use genetic information to suggest answers to fundamental questions about human history By looking at genetic variation in the world today and in the past we can reconstruct the recent and remote events and processes that have created the variation we see providing a fascinating reflection of our genetic past *Machine Learning* Yagang

Zhang, 2010-02-01 Machine learning techniques have the potential of alleviating the complexity of knowledge acquisition This

book presents today's state and development tendencies of machine learning. It is a multi-author book. Taking into account the large amount of knowledge about machine learning and practice presented in the book, it is divided into three major parts: Introduction, Machine Learning Theory and Applications. Part I focuses on the introduction to machine learning. The author also attempts to promote a new design of thinking machines and development philosophy. Considering the growing complexity and serious difficulties of information processing in machine learning, in Part II of the book, the theoretical foundations of machine learning are considered, and they mainly include self-organizing maps (SOMs), clustering, artificial neural networks, nonlinear control, fuzzy system, and knowledge-based system (KBS). Part III contains selected applications of various machine learning approaches from flight delays, network intrusion, immune system, ship design, to CT and RNA target prediction. The book will be of interest to industrial engineers and scientists as well as academics who wish to pursue machine learning. The book is intended for both graduate and postgraduate students in fields such as computer science, cybernetics, system sciences, engineering, statistics, and social sciences, and as a reference for software professionals and practitioners.

Map-based Mobile Services Liqiu Meng, Alexander Zipf, Tumasch Reichenbacher, 2005-12-05. The development of wireless telecommunication and ubiquitous computing technologies has led to a growing mobile population and dramatically changed patterns of working and everyday life. A smooth and safe mobility is only possible when the mobile person is well informed of the happenings in his ambient environments. Location-sensitive maps have proved a strong enhancement to what a mobile user can directly perceive from his ambient environments. Since ancient times, the map has been the favorite communication language of spatial information. It is even more the case for mobile applications where brand new maps can be wirelessly retrieved or generated in real time. The upsurge of map-based services on mobile devices has raised a number of new questions challenging the conventional computer-assisted cartography. Map-based mobile services provides a contemporary overview of research and development issues related to the design and the use of mobility supporting maps. The book has been written for professional cartographers who are striving for extending their theoretical, methodological, and practical knowledge to mobile mapping for surveyors and geo-service providers involved in the development of intelligent location-based services for software developers and cognitive scientists engaged in human-computer interaction, and for students and academics in cartography and geoinformation sciences. The book was initiated by the multidisciplinary workshop "Design of map-based mobile services" within the frame of the conference "Human and Computer Interaction on the Movement" held in Stuttgart, Germany, September 2003.
