What You See in Clear Water Geoffrey O'Gara,2002-08-13 For nearly a century the Indians on the Wind River Reservation in Wyoming have been battling their white farmer neighbors over the rights to the Wind River What You See in Clear Water tells the story of this epic struggle shedding light on the ongoing conflict over water rights in the American West one of the most divisive and essential issues in America today While lawyers argued this landmark case all the way to the U S Supreme Court Geoffrey O Gara walked the banks of the river with the

farmers ranchers biologists and tribal elders who knew it intimately Reading his account we come to know the impoverished Shoshone and Arapaho tribes living on the Wind River Reservation who believe that by treaty they control the water within the reservation We also meet the farmers who have struggled for decades to scratch a living from the arid soil and who want to divert the river water to irrigate their lands O Gara s empathetic portrayal of life in the West today the historical texture he brings to the land and its inhabitants and the common humanity he finds between hostile neighbors on opposite sides of the river make What You See in Clear Water an unusually rich and rewarding book **A File of a Life** Christina

Mars David M. Harland,2007-09-24 Mars has long been believed to have been cold dead and dry for aeons but there is now striking new proof that not only was Mars a relatively warm and wet place in geologically recent times but that even today there are vast reserves of water frozen beneath the planet s surface As well as casting fascinating new insights into Mars past this discovery is also forcing a complete rethink about the mechanisms of global planetary change and the possibility that there is microbial life on Mars David Harland considers the issue of life on Mars in parallel with the origin of life on Earth At the time the Viking instruments were designed it was thought that all terrestrial life ultimately derived its energy from sunlight and that the earliest form of life was the cyanobacteria with chlorophyll for photosynthesis It was assumed the same would be the case on Mars and that microbial life would be on or near the surface that the Vikings had sampled In parallel with these NASA projects the European Space Agency developed the Mars Express remote sensing orbiter which has detected traces of methane that may have been released by microbes If microbial life is found on Mars will it be based on DNA Will this indicate that life developed independently Or that it has characteristics in common with the most ancient forms of terrestrial life If life is found on two planets in the same planetary system this would favour the panspermia hypothesis And if martian life is radically different then in light of the discovery of planetary systems around other stars this would as remarked by Philip Morrison of MIT transform life from the status of a miracle to that of a statistic These are all questions that the exploration of Mars for life are aimed to answer **DK Eyewitness Back Roads Great Britain** DK
