Global Mobile Satellite Communications Stojce Dimov Ilcev, 2005-12-05 Global mobile satellite communications GMSC are specific satellite communication systems for maritime land and aeronautical applications It enables connections between moving objects such as ships vehicles and aircrafts and telecommunications subscribers through the medium of communications satellites ground earth stations PTT or other landline telecommunications providers Mobile satellite communications and technology have been in use for over two decades Its initial application is aimed at the maritime market for commercial and distress applications In recent years new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system This book is important for modern shipping truck train and aeronautical societies because GMSC in the present millennium provides more effective business and trade with emphasis on safety and commercial communications Global Mobile Satellite

Communications is written to make bridges between potential readers and current GMSC trends mobile system concepts and network architecture using a simple mode of style with understandable technical information characteristics graphics illustrations and mathematics equations Global Mobile Satellite Communications represents telecommunications technique and technology which can be useful for all technical staff on vessels at sea and rivers on all types of land vehicles on planes on off shore constructions and for everyone possessing satellite communications handset phones **Global Mobile**

Satellite Communications Theory Stojče Dimov Ilčev, 2016-09-23 This book discusses current theory regarding global mobile satellite communications GMSC for maritime land road and rail and aeronautical applications It covers how these can enable connections between moving objects such as ships road and rail vehicles and aircrafts on one hand and on the other ground telecommunications subscribers through the medium of communications satellites ground earth stations Terrestrial Telecommunication Networks TTN Internet Service Providers ISP and other wireless and landline telecommunications providers This new edition covers new developments and initiatives that have resulted in land and aeronautical applications and the introduction of new satellite constellations in non geostationary orbits and projects of new hybrid satellite constellations The book presents current GMSC trends mobile system concepts and network architecture using a simple mode of style with understandable technical information characteristics graphics illustrations and mathematics equations The first edition of Global Mobile Satellite Communications Springer 2005 was split into two books for the second edition one on applications and one on theory This book presents global mobile satellite communications theory **Doppler Applications in LEO Satellite Communication Systems** Irfan Ali, Pierino G. Bonanni, Naofal Al-Dhahir, John E. Hershey, 2005-12-06 Doppler Applications in LEO Satellite Communication Systems develops and presents an important class of techniques useful in the construction of little Low Earth Orbit LEO satellite communication systems It centers on the very significant Doppler shift that attends communications through a LEO satellite and shows how this phenomenon can be exploited for an unexpected benefit The techniques taught in the book are expected to be particularly attractive to system engineers because ground based transceivers must generally compensate for the large Doppler component and therefore the necessary receiver processing loops are often already in place and expensed This volume starts with a recounting of the characteristics of a LEO satellite and its orbit The 2nd chapter addresses the LEO orbital geometry and reviews the Doppler effect attending LEO communications Chapter three is focused on the important task of estimating the Doppler at a ground terminal Appropriate signal processing algorithms are reviewed Chapter four is concerned with predicting LEO satellite visibility Chapters five and six are respectively devoted to the use of the significant LEO Doppler as an aid in a new traffic flow control protocol and as an aid for effecting communications power control The last chapter describes MATLAB based analysis Doppler Applications in LEO Satellite Communication Systems provides a thorough review of the LEO Doppler phenomenon **Scientific and Technical Aerospace Reports**, 1995 **Connections Management Strategies in Satellite Cellular Networks** Malek

Benslama, Wassila Kiamouche, Hadj Batatia, 2015-02-16 This book provides a novel method based on advantages of mobility model of Low Earth Orbit Mobile Satellite System LEO MSS which allows the evaluation of instant of subsequent handover of a MS even if its location is unknown This method is then utilized to propose two prioritized handover schemes Pseudo Last Useful Instant PLUI strategy and Dynamic Channel Reservation DCR like scheme based respectively on LUI and DCR schemes previously proposed in literature The authors also approach a different aspect of handover problem calls with short durations dropped due to a handover failure We propose a decision system based on fuzzy logic Rescuing System that allows the rescue of calls with short durations facing a premature at the expense of those lasting for long durations
