Lowland Floodplain Rivers P. A. Carling, G. E. Petts, 1992 *Geomorphic Approaches to Integrated Floodplain Management of Lowland Fluvial Systems in North America and Europe* Paul F. Hudson, Hans Middelkoop, 2015-04-29 This volume provides a comprehensive perspective on geomorphic approaches to management of lowland alluvial rivers in North America and Europe Many lowland rivers have been heavily managed for flood control and navigation for decades or centuries resulting in engineered channels and embanked floodplains with substantially altered sediment loads and geomorphic processes Over the past decade floodplain management of many lowland rivers has taken on new importance because of concerns about the potential for global environmental change to alter floodplain processes necessitating revised management strategies that minimize flood risk while enhancing environmental attributes of floodplains influenced by local embankments and upstream dams Recognition of the failure of old perspectives on river management and the need to enhance environmental sustainability has stimulated a new approach to river management The manner that river restoration and integrated management are implemented however requires a case study approach that takes into account the impact of historic human impacts to the system especially engineering The river basins examined in this volume provide a representative coverage of the drainage of North America and Europe taking into account a range of climatic and physiographic provinces They include the 1 Sacramento California USA 2 San Joaquin California 3 Missouri Missouri USA 4 Red Manitoba Canada and Minnesota USA 5 Mississippi Louisiana USA 6 Kissimmee Florida USA 7 Ebro Spain 8 Rhone France 9 Rhine Netherlands 10 Danube Romania and 11 Volga Russian Federation Rivers The case studies covered in these chapters span a range of fluvial modes of adjustment including sediment channel hydrologic regime floodplains as well as ecosystem and environmental associations **Geomorphology and River Management** Gary J. Fryirs, 2013-04-29 This book outlines a generic set of procedures termed the River Styles Framework which provides a set of tools for interpreting river character behavior condition and recovery potential Applications of the framework generate a coherent package of geomorphic information providing a physical template for river rehabilitation activities management and restoration of rivers is a rapidly growing topic for environmental scientists geologists and ecologists this book provides a learning tool with which to approach geomorphic applications to river management describes the essential geomorphological principles underlying river behaviour and evolution demonstrates how the River Styles Framework can turn geomorphic theory into practice to develop workable strategies for restoration and management based on real case studies and authors extensive experience applicable to river systems worldwide synthesises fluvial geomorphology ecology and management

A. Brebbia, 2011 In recent years significant advances have been made in the development and application of software tools for predicting the flow water quality sediment transport and ecological processes in river systems Since 2001 the Wessex Institute of Technology has organized a biennial conference to facilitate the sharing of these advances This book contains the papers presented at the latest conference in the series The papers presented at the Conference cover Water resources management Flood studies Ecological and environmental impact Erosion and sediment transport Hydrological modelling Eco hydraulics River restoration and rehabilitation Hydropower production River and watershed management Water quality issues Trans boundary river issues Estuaries and deltas Changing Climate Droughts and desertification Water and health and Socio economic and political issues Handbook for the Assessment of Soil Erosion and Sedimentation Using Environmental Radionuclides F. Zapata, 2002 This Handbook is a new comprehensive reference of the methodologies field laboratory and desk work for using radionuclides primarily ^{137}Cs and ^{210}Pb to establish rates and spatial patterns of soil redistribution within the landscape and determine the geochronology of sediment deposits It is based on the recent developments made by a global network of research scientists working on soil erosion and sedimentation research using environmental radionuclides Environmental Management of River Basin Ecosystems Mu. Ramkumar, K Kumaraswamy, R. Mohanraj, 2015-02-18 This book offers a unique collection of inter and multidisciplinary studies on river systems Rivers have been the prime source of sustenance since the advent of civilization and river systems often form the basis for agriculture transport water and land for domestic commercial and industrial activities fostering economic prosperity A river basin is a basic geographical and climatological unit within which the vagaries of natural processes act and manifest themselves at different spatio temporal scales Even if compared side by side no two river basins respond to natural processes in the same way and thus it has long been recognized that each river basin is unique Hence any developmental activity or conservation effort has to be designed and implemented to match each unique river basin With the burgeoning population and increasing dependency on natural resources understanding and maintaining river systems has become increasingly important This book provides a varied reference work on and unprecedented guidelines for conducting and implementing research on river basins and for managing their ecological development **Farm Land Erosion** S. Wicherek, 2012-12-02 During the last twenty years mutations within agricultural systems in France and Europe have brought on a spectacular worsening of soil erosion and degradation This volume contributed to by scientists from 25 countries discusses how this risk can be evaluated and which solutions should be adopted without radically disturbing the socio economic orientation of major agricultural regions It is an excellent starting point for the development of new research themes and will be of great value to soil and environmental
