Lucy's Child Donald C. Johanson, James Shreeve, 1989 An account of a discovery that generates new insights into human origins  
Lucy's Legacy Dr. Donald Johanson, Kate Wong, 2010-06-01 Lucy is a 3.2 million year old skeleton who has become the spokeswoman for human evolution She is perhaps the best known and most studied fossil hominid of the twentieth century the benchmark by which other discoveries of human ancestors are judged From Lucy's Legacy In his New York Times bestseller Lucy The Beginnings of Humankind renowned paleoanthropologist Donald Johanson told the incredible story of his discovery of a partial female skeleton that revolutionized the study of human origins Lucy literally changed our understanding of our world and who we come from Since that dramatic find in 1974 there has been heated debate and most important more groundbreaking discoveries that have further transformed our understanding of when and how humans evolved In Lucy's Legacy Johanson takes readers on a fascinating tour of the last three decades of study the most exciting period of paleoanthropologic investigation thus far In that time Johanson and his colleagues have uncovered a total of 363 specimens of *Australopithecus afarensis* Lucy's species a transitional creature between apes and humans spanning 400 000 years As a result we now have a unique fossil record of one branch of our family tree that family being humanity a tree that is believed to date back a staggering 7 million years Focusing on dramatic new fossil finds and breakthrough advances in DNA research Johanson provides the latest answers that post Lucy paleoanthropologists are finding to questions such as How did *Homo sapiens* evolve When and where did our species originate What separates hominids from the apes What was the nature of Neandertal and modern human encounters What mysteries about human evolution remain to be solved Donald Johanson is a passionate guide on an extraordinary journey from the ancient landscape of Hadar Ethiopia where Lucy was unearthed and where many other exciting fossil discoveries have since been made to a seaside cave in South Africa that once sheltered early members of our own species and many other significant sites Thirty five years after Lucy Johanson continues to enthusiastically probe the origins of our species and what it means to be human

**Just Like a Woman** Dianne Hales, 2000-06-06 In recent years researchers in many scientific fields have actively focused on what being female really means Their startling conclusion Almost every assumption made about women physical medical historical psychological turns out to be untested unproven or untrue Stereotypes about women are as old as time and as current as still too prevalent beliefs based on male models Acclaimed health writer Dianne Hales brings together the cutting edge research in anthropology physiology psychology neuroscience endocrinology and medicine in a book that reveals the complex interconnections between all aspects of a woman's life from infancy to old age Gender science is now clearly demonstrating that women are not the second sex but a separate sex unique in body mind and spirit Just Like a Woman explains what it means to live in a woman's body think with a woman's brain drink in the world with a woman's senses and react with a woman's sensibility to the stresses and elations of

her multiple roles Refreshingly free of ideology this meticulously documented book offers a stunningly liberating message that expands our concept of human potential and will forever change the way every woman views herself      **The Scientific Case Against Scientific Creationism** Jon P. Alston,2003-09 Sociologist Jon P Alston offers a unique and clear analysis of the weaknesses of scientific creationism and intelligent design by identifying what creationists say when they reject evidence for evolution He demonstrates how scientific creationists accept non scientific statements that contradict established scientific knowledge Acceptance of anti evolutionary knowledge also demands acceptance of a literal six day creation and other statements contradicting scientific findings Few persons have read so closely the writings of scientific creationists to illustrate how anti scientific anti evolutionists become when they criticize the fact of evolution Creationists are forced to develop just so stories to defend their literal interpretations of Biblical scripture Alston finds creationists cannot defend their religious beliefs using established scientific methodologies and principles      God-creature-revelation Jerry D. Kormeyer,1995 Educated Western Christians seek to understand the scientific basis of evolution as well as to justify why a God worth worshiping can be responsible yet not indictable for evil The author creates an innovative theological framework that addresses these concerns and provides part of a structure for fundamental theology which is based on the neoclassical metaphysics of Charles Hartshorne and the speculative cosmology of Alfred North Whitehead His model of the divine has three basic principles God is love God is the creator and this creativity is an integral part of divine essence From this model he develops a fundamental theology which focuses on the nature of divinity the interaction between human and the divine and divine revelation He attributes much of his own concept of revelation to Whitehead s model in which revelation is indicative of a successful communion between human and divine This revelation is achieved through symbolic mediation and it is as much inter personal reconciliation as it is a universal resonance of the creative essence between heaven and earth This framework shows initial agreement with Christian traditions it is highly coherent universal in scope and most importantly it has rich potential for future Christian understanding      *C.S. Peirce* Jaap Brakel,Michael Van Heerden,1998 This book contains the contributions to an international symposium on Charles Sanders Peirce 1839 1914 Notwithstanding that much of Peirce s philosophical writings still are to be published his contributions to contemporary philosophy can be felt in almost every field The symposium was held at the Institute of Philosophy of the Katholieke Universiteit Leuven in May 1997 Its express aim was to examine Peirce s thought in terms of both its historical integrity and in the application of his thought to current problems The contributions to this book present a comprehensive portrayal of the metaphysical and epistemological strands in the thought of this multi faceted thinker      *The ^AWorld from Beginnings to 4000 BCE* Ian Tattersall,2008-02-01 In this lively and readable introduction renowned anthropologist Ian Tattersall thoroughly examines both fossil and archaeological records to trace human evolution from the earliest beginnings of our zoological family Hominidae through the appearance of Homo sapiens to the Agricultural Revolution      **Quantitative Methods in**

**Biological and Medical Sciences** H.O. Lancaster, 2012-12-06 My original intention was to write a history of medical statistics used in its prewar sense expanding the writings on the subject by Major Greenwood from which I formed many of my ideas in the early days immediately after the Second World War In later years I decided that the scope of his works was narrower than what I think is appropriate now for he was writing in an era before the acceptance and use of the Fisherian methods and he was probably not aware of the mathematization of many parts of biological theory Further the boundary between the medical and biological sciences has largely disappeared Many texts have now been written on branches of the theory and practice inspired by R A Fisher see 4 13 I discuss the history of the use of quantitative methods in the biological sciences defined after the style of Peller 1967 as that branch of science that uses a quantitative approach to or quantitative logical reasoning on or biology The mathematical techniques any issue having to do with medicine are various and not classified here Within the book I use biological sciences to include medicine but use the longer phrase in its title to avoid misunderstandings as to content Moreover most of the experimental work carried out in medical research laboratories is performed on animals other than man Psychological Perspectives on Walking Ralf Rissler, Matúš Šucha, 2020-06-15
