

Teoría de Lamarck

Se llama Lamarckismo o Teoría de Lamarck a la teoría científica sobre la evolución de las especies, propuesta por el naturalista francés **Jean-Baptiste Lamarck** en su libro *Filosofía zoológica* de 1809. Esta es la primera teoría evolucionista de la historia, antecesora fundamental de la que propuso luego Charles Darwin en 1859.

Modèles et méthodes pour l'évolution biologique Gilles Didier, Stéphane Guindon, 2022-07-01 l'origine de la diversité du vivant l'évolution biologique est le phénomène par lequel les espèces naissent se transforment ou disparaissent au cours du temps Son étude fait intervenir des méthodes d'analyse sophistiquées qui reposent la fois sur la modélisation mathématique des processus biologiques qui interviennent et sur la conception d'algorithmes efficaces pour ajuster ces modèles aux données génétiques et morphologiques Modèles et méthodes pour l'évolution biologique expose les principales méthodes utilisées pour étudier l'évolution et offre un large panorama illustrant la variété des approches formelles mises en œuvre notamment dans l'optimisation combinatoire les modèles stochastiques l'inférence statistique l'échantillonnage par Monte Carlo Certaines des applications marquantes de ces méthodes y sont détaillées Elles concernent par exemple l'étude de virements migratoires des anciennes populations humaines ou la progression des pandémies La naissance de l'intelligence Georges Bohn, 1909

L'évolution vue par un botaniste Jean-Marie Pelt, 2011-01-05 L'évolution est pour Jean-Marie Pelt une longue histoire Dans les années 1960 quand il suivait les cours de botanique de la faculté de Nancy on apprenait encore par cœur la disposition respective des pétales des étamines et des pistils L'émergence et l'évolution de ces formes et de ces structures au cours des temps géologiques n'étaient jamais voquées Et pourtant l'évolution des espèces n'est pas l'apanage du monde animal loin de là En comparant les sociétés végétales et les sociétés humaines Jean-Marie Pelt est l'un des premiers scientifiques à faire des plantes de vrais très vivants pour le commun des mortels Au fil de ses observations le doute s'insinue malgré tout comment un mécanisme aussi simple que la sélection naturelle pourrait-il tout expliquer Comment par exemple certaines orchidées peuvent-elles se modifier au point de donner un de leurs pétales l'apparence visuelle et olfactive d'un insecte Aucun botaniste ne s'était jusqu'ici vraiment exprimé sur les mécanismes de l'évolution et sur ses orientations dans le règne végétal cette lacune est désormais

Picturing Evolution and Extinction Fae Brauer, 2015-10-05 With the increasing loss of biological diversity in this Sixth Age of Mass Extinction it is timely to show that devolutionary paranoia is not new but rather stretches back to the time of Charles Darwin It is also an opportune moment to show how human driven extinction as designated by the term Anthropocene has long been acknowledged The halcyon days of European industrial progress colonial expansion and scientific revolution trumpeted from the Great Exhibition of 1851 until the Dresden International Hygiene Exhibition of 1930 were constantly marred by fears of rampant degeneration depopulation national decline environmental devastation and racial extinction This is demonstrated by the discourses of catastrophism charted in this book that percolated across Europe in response to the theories of Darwin and Jean Baptiste Lamarck as well as Marcellin Berthelot Camille Flammarion Ernst Haeckel Louis Landouzy Félix Le Dantec Cesare Lombroso Thomas Huxley Benedictine Augustin Morel Louis Pasteur Lisée Reclus Rudolf Steiner and Wilhelm Wundt among others This book presents pioneering explorations of the interrelationship between these discourses and modern visual cultures and the ways in which the picturing of evolution and extinction by artists as diverse as

Roger Broders Albert Besnard Fernand Cormon H l ne Dufau mile Gall Franti ek Kupka Pablo Picasso Carles Mani y Roig Sophie Taeuber and Vasilii Vatagin betrayed anxieties subliminally festering over degeneration alongside latent hopes of regeneration Following Darwin s concept of evolution as Janus faced the dialectical interplay of evolution and extinction and degeneration and regeneration is explored in modern visual cultures in Australia America Britain France Germany Russia Spain and Switzerland at significant spatio temporal junctures between 1860 and 1930 By unravelling the picturing of the dread of alcoholism cholera dysentery tuberculosis typhoid and rabies alongside phobias of animalism criminality hysteria impotency and ecological disaster each chapter makes an original contribution to this new field of scholarship By locating these discourses and visual cultures within the golden age of Neo Lamarckism they also reveal how regeneration was pictured as the Janus face of degeneration able to facilitate evolution through the inheritance of beneficial characteristics in propitious environments In striking such an uplifting note amidst the dissonant cacophony of catastrophism this book reveals why the art and science of Transformism proved so appealing in France as elsewhere and why visual cultures of regeneration became as dominant in the twentieth century as the picturing of degeneration had been in the nineteenth century It also illuminates the paradoxical inversion that occurred in the twentieth century when devolution became equivalent to evolution for many Modernists Hence whilst this book opens with the picturing of indigenous people in Australia and North America as doomed races by the first publication of Darwin s *On The Origin of Species* it closes with the quest by 1930 for a regenerative suntan as dark as the skin of those indigenous people
