The Naked Sun Isaac Asimov, 1957 A millennium into the future two advancements have altered the course of human history the colonization of the Galaxy and the creation of the positronic brain On the beautiful Outer World planet of Solaria a handful of human colonists lead a hermit like existence their every need attended to by their faithful robot servants To this strange and provocative planet comes Detective Elijah Baley sent from the streets of New York with his positronic partner the robot R Daneel Olivaw to solve an incredible murder that has rocked Solaria to its foundations The victim had been so reclusive that he appeared to his associates only through holographic projection Yet someone had gotten close enough to bludgeon him to death while robots looked on Now Baley and Olivaw are faced with two clear impossibilities Either the Solarian was killed by one of his robots unthinkable under the laws of Robotics or he was killed by the woman who loved him so much that she never came into his presence

Uncovering Lives Alan C. Elms, 1997-05-01 Psychobiography is often attacked by critics who feel that it trivializes complex adult personalities explaining the large deeds of great individuals as George Will wrote by some slight the individual suffered at a tender age say 7 when his mother took away a lollipop Worse yet some writers have clearly abused psychobiography for instance to grind axes from the right Nancy Clinch on the Kennedy family or from the left Fawn Brodie on Richard Nixon and others have offered woefully inept diagnoses such as Albert Goldman's portrait of Elvis Presley as a split personality and a delusional paranoid And yet as Alan Elms argues in *Uncovering Lives* in the hands of a skilled practitioner psychobiography can rival the very best traditional biography in the insights it offers Elms makes a strong case

for the value of psychobiography arguing in large part from example Indeed most of the book features Elms's own fascinating case studies of over a dozen prominent figures among them Sigmund Freud the father of psychobiography B F Skinner Isaac Asimov L Frank Baum Vladimir Nabokov Jimmy Carter George Bush Saddam Hussein and Henry Kissinger These profiles make intriguing reading For example Elms discusses the fiction of Isaac Asimov in light of the latter's acrophobia fear of heights and mild agoraphobia fear of open spaces and Elms includes excerpts from a series of letters between himself and Asimov He reveals an unintended subtext of *The Wizard of Oz* that males are weak females are strong think of Scarecrow Tin Man the Lion and the Wizard versus the good and bad witches and Dorothy herself and traces this in part to Baum's childhood heart disease which kept him from strenuous activity and to his relationship with his mother in law Matilda Joslyn Gage a distinguished advocate of women's rights And in a fascinating chapter he examines the abused childhood of Saddam Hussein the privileged childhood of George Bush and the radically different psychological paths that led these two men into the Persian Gulf War Elms supports each study with extensive research much of it never presented before for instance on how some of the most revealing portions of C G Jung's autobiography were deleted in spite of his protests before publication Along the way Elms provides much insight into how psychobiography is written Finally he proposes clear guidelines for judging high quality work and offers practical tips for anyone interested in writing in this genre Written with great clarity and wit *Uncovering Lives* illuminates the contributions that psychology can make to biography Elms's enthusiasm for his subject is contagious and will inspire would be psychobiographers as well as win over the most hardened skeptics

Real Space Paul Levinson, 2014-01-21 Is planet earth the end of the line or is space itself the next stop Cyberspace It s incredible taking us to any part of the planet we want to visit But as Paul Levinson shows in his brilliant new book when it comes to transport we re still stuck in the past preferring to take our bodies with us Whether it s trains yachts scooters or pogo sticks we re compelled to keep moving our movements curtailed only by the earth itself In our imaginations however we soar way past the limits of current technology With a lucid but reflective style that takes in everything from robots and science fiction to religion and philosophy Paul Levinson asks why there is a deep seated human desire to know what s out there Why after getting a man on the moon did the US space program develop so slowly In a world where space is constantly repackaged how do we know what real space is Is our desire to get into space natural or a religious craving and is it a modern phenomenon or did our ancestors also dream of escaping the clutches of Mother Earth Jam packed with exciting innovative even revolutionary thinking about our future Realspace is essential reading for everyone who has ever sat at their desk gazed into the distance and imagined boarding a space shuttle

Computer After Me, The: Awareness And Self-awareness In Autonomic Systems Jeremy Pitt, 2014-08-29 We are increasingly seeing computer systems which are expected to function without operator intervention This is perhaps acceptable for running computer networks or traffic lights however we are now seeing computer systems deployed to qualitatively influence human judgments such as rulings on legal disputes or fitness for work to evaluate disability benefits In keeping with the precautionary principle it is important that those who are developing this capability technologists and scientists think through its potential implications The aim of this book is to explore the technological and social and implications of computers and robots becoming increasingly aware of their environment and the people in it and their being increasingly self aware of their own existence within it The wide ranging scope of the text covers three different angles of the concept of the computer after me 1 the next generation of computationally powerful aware systems 2 systems in which the computer is aware of qualitatively impact human concerns such as law health and rules and 3 computers and robots which are aware of themselves

Science Fiction and Posthumanism in the Anthropocene Jonathan Hay, 2024-12-26 With science fiction stories imagining futures and worlds vastly different from our own and posthuman philosophies radically reconceptualising our species place within our own world this book is a deep dive into the similarities between science fiction studies and critical posthumanism and how they can be read together Both fields fantasise about future technologies envisage alienness through conversation with everyday life and both anticipate the Anthropocene as a dire source of rupture from the present Drawing inspiration from these and other consonances this book

establishes a common theoretical ground between the two fields upon which the two currents of future oriented thought can meet and begin to share a common language An investigation that draws critical currency from the everyday condition of our species in relation to technology and our perilous situation in the Anthropocene the book observes posthumanism not just as a theoretical framework that may be applied to science fictional ideas but also as an integral part of how it is that science fiction is generated Featuring case studies of the work of prominent authors Isaac Asimov Ursula K Le Guin and Kim Stanley Robinson alongside the BBC television series Doctor Who and the cult videogame Outer Wilds Science Fiction and Posthumanism in the Anthropocene formulates a new critical paradigm which recognises the value of such works to posthumanist thought Addressing those with an interest in either academic discipline it demonstrates that urgent discourses around our shared future are more imperative now than ever before

Survival of the City Edward Glaeser, David Cutler, 2021-09-07 One of our great urbanists and one of our great public health experts join forces to reckon with how cities are changing in the face of existential threats the pandemic has only accelerated Cities can make us sick They always have diseases spread more easily when more people are close to one another And disease is hardly the only ill that accompanies urban density Cities have been demonized as breeding grounds for vice and crime from Sodom and Gomorrah on But cities have flourished nonetheless because they are humanity s greatest invention indispensable engines for creativity innovation wealth and connection the loom on which the fabric of civilization is woven But cities now stand at a crossroads During the global COVID crisis cities grew silent as people worked from home if they could work at all The normal forms of socializing ground to a halt How permanent are these changes Advances in digital technology mean that many people can opt out of city life as never before Will they Are we on the brink of a post urban world City life will survive but individual cities face terrible risks argue Edward Glaeser and David Cutler and a wave of urban failure would be absolutely disastrous In terms of intimacy and inspiration nothing can replace what cities offer Great cities have always demanded great management and our current crisis has exposed fearful gaps in our capacity for good governance It is possible to drive a city into the ground pandemic or not Glaeser and Cutler examine the evolution that is already happening and describe the possible futures that lie before us What will distinguish the cities that will flourish from the ones that won t In America they argue deep inequities in health care and education are a particular blight on the future of our cities solving them will be the difference between our collective good health and a downward spiral to a much darker place

timely discussions of a technology in its infancy Identifying controversial legal ethical and philosophical problems the authors reveal how issues surrounding robotics and regulation are more complicated than engineers could have anticipated and just how much definitional and applied work remains to be done This groundbreaking examination of a brand new reality will be of interest and of use to a variety of groups as the authors include engineers ethicists lawyers roboticists philosophers and serving military

The Golden Age of Science Fiction John Wade,2020-11-12 A detailed look at the British world of science fiction in the 1950s John Wade grew up in the 1950s a decade that has since been dubbed the golden age of science fiction It was a wonderful decade for the genre but not so great for young fans With early television broadcasts being advertised for the first time as unsuitable for children and the inescapable barrier of the X certificate in the cinema barring anyone under the age of sixteen the author had only the radio to fall back on and that turned out to be more fertile for the budding SF fan than might otherwise have been thought Which is probably why as he grew older rediscovering those old TV broadcasts and films that had been out of bounds when he was a kid took on a lure that soon became an obsession For him the super accuracy and amazing technical quality of today s science fiction films pale into insignificance beside the radio early TV and B picture films about people who built rockets in their back gardens and flew them to lost planets or tales of aliens who wanted to take over if not our entire world then at least our bodies This book is a personal account of John Wade s fascination with the genre across all the entertainment media in which it appeared the sort of stuff he reveled in as a young boy and still enjoys today Not only a well researched book grounded in hundreds of sources but also an unmistakable labor of love New York Journal of Books
