The Automaton in English Renaissance Literature features original essays exploring the automaton from animated statue to anthropomorphized machine in the poetry prose and drama of England in the 16th and 17th centuries Addressing the history and significance of the living machine in early modern literature the collection places literary automata of the period within their larger aesthetic historical philosophical and scientific contexts While no single theory or perspective conscribes the volume taken as a whole the collection helps correct an assumption that frequently emerges from a post Enlightenment perspective that these animated beings are by definition exemplars of the new science or that they point necessarily to man's triumphant relationship to technology On the contrary automata in the sixteenth and seventeenth centuries seem only partly and sporadically to function as embodiments of an emerging mechanistic or materialist worldview Renaissance automata were just as likely not to confirm for viewers a hypothesis about the man machine Instead these essays show automata were often a source of wonder suggestive of magic proof of the uncannily animating effect of poetry indeed just as likely to unsettle the divide between man and divinity as that between man and matter **The Western Herbal Tradition** Graeme Tobyn,Alison Denham,Midge Whitelegg,2016-02-21 Presenting a valuable new angle for your phytotherapy practice this book traces the uses of 27 vital plants through 2000 years of history From Dioscorides and Trotula to the great Renaissance folios and up to present day this book demonstrates how traditional usage can be transmuted into your current practice

Reading Green in Early Modern England Leah Knight,2016-04-08 Green in early modern England did not mean what it does today but what did it mean Unveiling various versions and interpretations of green this book offers a cultural history of a color that illuminates the distinctive valences greenness possessed in early modern culture While treating green as a panacea for anything from sore eyes to sick minds early moderns also perceived verdure as responsive to their verse sympathetic to their sufferings and endowed with surprising powers of animation Author Leah Knight explores the physical and figurative potentials of green as they were understood in Renaissance England including some that foreshadow our paradoxical dependence on and sacrifice of the green world Ranging across contexts from early modern optics and olfaction to horticulture and herbal health care this study explores a host of human encounters with the green world both the impressions we make upon it and those it leaves with us The first two chapters consider the value placed on two ways of taking green into early modern bodies and minds by seeing it and breathing it in while the next two address the manipulation of greenery by Orphic poets and medicinal herbalists as well as grafters and graffiti artists A final chapter suggests that early

modern modes of treating green wounds might point toward a new kind of intertextual ecology of reading and writing
Reading Green in Early Modern England mines many pages from the period not literally but tropically metaphorically green that cultivate a variety of unexpected meanings of green and the atmosphere and powers it exuded in the early modern world
