The Reconstruction of Natural Zeolites Habbib Ghobarkar,Oliver Schäf,Yvan Massiani,Philippe Knauth,2012-12-06 More than seventeen years have passed now since Glauco Gottardi and Ermano Galli 1 have published their remarkable book on NATURAL ZEOLITES where properties and features of naturally occurring phases then available have been compiled Several new natural zeolites have been found since then but also natural counterparts of zeolites which have only been known as synthesis products The natural formation conditions of zeolites could only be deduced and estimated from their geological environment at the time when NATURAL ZEOLITES has been published as zeolite synthesis was mainly focused on procedures at low pressures such as those introduced by Barrer and co workers Natural zeolites however had only been obtained occasionally and systematic study to reconstruct these formation conditions has not been

performed ever since This book is focused on the synthesis of natural zeolites by simulating the natural synthesis conditions in the laboratory which are essentially different in means and results from those obtained by conventional synthesis methods Although the synthesis in the laboratory has undoubtedly a great number of advantages over nature such as the employment of proper precursors or the choice of pressure and temperature in a wide range the synthesis time is very limited in respect to natural conditions synthesis times of years or even tens of years which would be necessary to obtain synthesis results for some zeolites e g at 4 °C deep sea conditions are rather unrealistic
