Nanotechnology in Catalysis Bing Zhou, Sophie Hermans, Gabor A. Somorjai, 2014-09-12 Catalysts heterogeneous homogeneous and enzyme are usually nanoparticles These are of vital for the functioning of the human body for photosynthesis and for producing fuels and chemicals in the petroleum and chemical industries Interest in nanoscience and in nanotechnology in recent years focused attention on the opportunity to develop catalysts that exhibit 100% selectivity for a desired product thus removing byproducts and eliminating waste This type of selective process is often called green chemistry or green technology This book is mainly based on the first and second symposia on Nanotechnology 51 in Catalysis which were held in spring 2001 at the ACS 221 National Meeting in San Diego CA and in fall 2002 at the ACS 2241h National Meeting in Boston MA respectively We also extended our invitation to those who did not attend the meetings to contribute chapters where we saw a need to round out the scope of the topic All chapters were peer reviewed prior to final acceptance We believe that the additional chapters and the peer review significantly improved the quality of the book In the summer of 2000 when we first proposed to organize a symposium on Nanotechnology in Catalysis to the ACS Secretariat of Catalysis and Surface Science CATL we received strong support from Dr Nancy B Jackson then General Secretary of CATL The symposium was enthusiastically received by the catalysis community On the first day of the symposium the conference room could not hold all the attendees
