*Innovation in China* Richard P. Appelbaum, Cong Cao, Xueying Han, Rachel Parker, Denis Simon, 2018-10-15 China is in the midst of transitioning from a manufacturing based economy to one driven by innovation and knowledge This up to date analysis evaluates China's state led approach to science and technology and its successes and failures In recent decades China has seen huge investments in high tech science parks a surge in home grown top ranked global companies and a significant increase in scientific publications and patents Helped by state policies and a flexible business culture the country has been able to leapfrog its way to a more globally competitive position However the authors argue that this approach might not yield the same level of progress going forward if China does not address serious institutional organizational and cultural obstacles While not impossible this task may well prove to be more difficult for the Chinese Communist Party than the challenges that China has faced in the past

The Social Life of Nanotechnology Barbara Herr Harthorn, John W. Mohr, 2013-06-03 This book addresses the interconnections and tensions between technological development the social benefits and risks of new technology and the changing political economy of a global world system as they apply to the emerging field of nanotechnologies The basic premise developed throughout the volume is that nanotechnologies have an undertheorized and often invisible social life that begins with their constructed origins and propels them around the globe across multiple localities institutions and collaborations through diverse industries research labs and government agencies and into the public sphere The volume situates nano innovation and development as a modernist science and technology project in a tense and unstable relationship with a fractured postmodern social world The book is unique in incorporating and integrating studies of innovation systems along with a focus on the risks and consequences of a

globally significant set of emerging technologies It does this by examining the social and political conditions of their creation production emergence and reception

**Nanotech and the Humanities** Chris P. Toumey, 2019-01-07 Researchers in the humanities and social sciences have examined nanotechnology for more than twenty years Their interests include the history of nanotech religious reactions and public engagement with it This collection shows that the humanities and social sciences contribute to our understanding of nanotechnology It will also serve to accompany textbooks in physics chemistry molecular biology and microelectronics because it illuminates societal and ethical issues in these disciplines
