Parental Care Its Evolution In Birds:

Parental Care and Its Evolution in Birds Samuel Charles Kendeigh, 1955 Reproductive Biology and Phylogeny of Birds, Part B: Sexual Selection, Behavior, Conservation, Embryology and Genetics Barrie G M Jamieson, 2007-01-02 The second part of volume 6 discusses sexual selection of ultraviolet and structural signals melanins and carotenoids as feather colorants and signals sexual selection and auditory signaling odors and chemical signaling sexual dimorphism sexual selection signal selection and the handicap principle courtship and copulation sexual conflict an **Parental Care in Mammals** David J. Gubernick, 2013-11-11 The editors of this volume have honored me by their invitation to write its Fore word an invitation extended because of my editing a book on the maternal behavior of mammals in 1963 Much as I would like to think that I had opened a new area of study and so played some part in the appearance of this fine new collection of chapters the facts are quite otherwise That in 1963 I could assemble the efforts of many distinguished investigators shows that the topic had already engaged their attention and had for some years past But even then the topic had origins extending much farther into the past to mention only Wiesner and Sheard's book *Maternal Behavior in the Rat* of 1933 Nevertheless in 1963 it seemed to me that the study of maternal care in mammals had lagged behind the study of other kinds of social behavior The present volume does much to establish parental care of the young as a topic central to an understanding of the relation between ontogeny and phylogeny to the development of the young to the social organization of the species and to its preservation It may now be seen not only as interesting but as a most significant pattern of behavior among mammals

Ornithology in Laboratory and Field Olin Sewall Pettingill, 2013-10-02 *Ornithology in Laboratory and Field* is intended as an aid to ornithological study at the college or university level Students who lack the background knowledge usually acquired during a course in general zoology or biology should keep it handy for ready reference a standard elementary text on the subject This book contains extensive material for purely informational reading possibly enough to supplant the need of an additional textbook Its principal purpose still complies with the title of its predecessors for it is essentially a manual to guide and assist the student in direct observations All twenty sections except the last *The Origin Evolution and Decrease of Birds* suggest methods and provide instructions for studies and all conclude with an extensive list of references frequently annotated for further information The twenty sections of the book can be taken up in almost any order and some may be omitted without affecting the instructional value of the others A feature of this new edition is an introduction to birds and ornithology intended for reading at the beginning of a course The purpose is twofold to show the significance of birds for study and to give an overall preview of ornithology the subject with emphasis on its wide scope how it is studied and some of the continuing and exciting opportunities that it offers for investigation **Biology and Comparative Physiology of Birds** A. J. Marshall, 2013-10-22 *Biology and Comparative Physiology of Birds* Volume II focuses on the physiology sexual characteristics sensory organs nervous system and reproduction of birds The selection first offers information on the central

nervous system and sensory organ of birds as well as cerebralization and related problems brain spinal cord skin taste and olfaction The book then ponders on equilibration vision and hearing of birds Topics include regulation of somatic musculature sensory structures and their nerves retina color vision and structure of the ear The publication examines endocrine glands thymus and pineal body and sex and secondary sexual characters including genetic sex and sex differentiation adrenal and parathyroid glands and pituitary or hypophysis The text also takes a look at energy metabolism thermoregulation body temperature reproduction breeding seasons and migration and flight of birds The selection is a vital source of information for readers interested in the physiology of birds

Current Ornithology D.M. Power, 2013-06-29 This edited series has three principal goals The first is to provide information in a relatively concise way for researchers needing an over view of specific disciplines The second is to provide an update on specific schools of thought bringing together ideas from colleagues whose works often appear in a variety of journals And the third is to stimulate and suggest directions for new research Volume 6 continues the tradition established by the previous editor and editorial board in providing new information updating our understanding of specific disciplines and stimulating new research In the first chapter Randall Breitwisch examines mortality patterns and sex ratios in monogamous birds He argues that there are many more components to measuring parental investment than are often realized our knowledge is weak in several areas Understanding the evolution of mating systems depends on better distinguishing the different intensities of natural selection that operate on males and females Gregory Butcher and Sievert Rohwer develop a framework for assessing the role of colorfulness in birds They propose several hypotheses to test and advocate evaluating more than one hypothesis at a time Future work on the evolution of distinctive coloration and of sexual and age dimorphism must take these ideas into account

The Biology of Birds John Arthur Thomson, 1923 A Study of

the Incubation Periods of Birds William Harry Bergtold, 1917 Avian Energetics and Nutritional Ecology C. Carey, 2012-12-06

A symposium held in 1973 chaired and organized by William R Dawson was the first major attempt to summarize and synthesize the existing information in the then emerging field of avian energetics. The symposium featured papers by James R King, William A Calder III, Vance A Tucker, and Robert E Ricklefs, and commentaries by George A Bartholomew, S Charles Kendeigh, and Eugene P Odum. The proceedings of the symposium, *Avian Energetics* (Paynter, 1974), played a critical role in stimulating interest and research in the field of avian energetics. Some twenty odd years later we are making another attempt to summarize the information in the field of avian energetics. Some obvious differences exist between its predecessor and this volume. Numerous improvements in methodology such as the use of doubly labeled water to estimate metabolism in free living birds now allow researchers to ask questions that could not be addressed previously. Second consideration of nutrition is now inseparable from that of energetics. This merger is necessary not only because food intake is the source of both energy and nutrients but also because one or more nutrients rather than energy can be limiting for a given species in a particular instance. Finally, the study of energetics and nutritional ecology particularly in birds and mammals has grown so dramatically that a single volume can now only partially cover the range of possible topics and can catalogue only a sampling of all the studies on the subject.
