Preventing Illness Among People With Coronary Heart Disease Robert M Kaplan, John D Piette, Joseph R Ferrari, 2012-11-12 Coronary artery disease CAD is the leading cause of death and illness in the United States and though much progress has been made in reducing cardiac risk factors obesity and diabetes mellitus are on the rise Preventing Illness Among People With Coronary Heart Disease explores recent advances in drug treatments for CAD risk factors and how these interventions can play an important role in improving the length and quality of patients lives by addressing health behaviors and the need for behavioral change This advanced text shows readers how mental health problems such as anxiety depression and alcoholism interplay with patients physical health and how certain interventions can improve patients outlook and health status Preventing Illness Among People With Coronary Heart Disease brings together researchers from a variety of disciplines to address subjects critical to secondary and tertiary preventive care for patients with coronary heart disease CHD This outstanding volume concentrates on studies from three major areas to help primary care practitioners and family

practice physicians intervene successfully with risky behaviors among their patients prone to or afflicted with coronary artery disease. These include the effects of heart disease on patients' mental health and quality of life and the role of formal behavioral interventions in promoting health among patients with heart disease. Readers of *Preventing Illness Among People With Coronary Heart Disease* acquire a solid understanding of the factors influencing CAD patients' behavioral patterns and mental states and how the prevalence of CAD can be reduced. Among the vital topics readers learn about are the effects of alcohol upon CHD and blood pressure, CHD risk factors in the elderly, exercise interventions, coping strategies, and cardiac illness strategies for assessment and prevention of smoking and cardiovascular disease. *Preventing Illness Among People With Coronary Heart Disease* seeks to provoke greater discussion and scientific activity among professionals in the field to improve understanding of the interplay of mental health, physical health, and behavioral medicine for patients with heart disease. Primary care practitioners, family practice physicians, medical students, and others interested in preventive cardiology, preventive care, or chronic disease management will learn about recent advances in research and treatment approaches that can be applied immediately to daily practice.

Prevention of Coronary Heart Disease: Diet, Lifestyle and Risk Factors in the Seven Countries Study Daan Kromhout, Alessandro Menotti, Henry Blackburn, 2012-12-06 In the 1940s I was struck by reports about many apparently healthy middle-aged men who dropped dead instantly from heart attacks. The causes of these sudden deaths were unknown. I was interested to discover physiochemical characteristics of individuals with predictive value for the occurrence of these fatal heart attacks. The discovery of preventive variables would point ways to prevent this disease. In order

to find relationships between mode of life and susceptibility to heart disease contrasting populations had to be studied. Variety not a high degree of homogeneity in culture and habits must be sought. After exploratory surveys in countries with supposed differences in dietary patterns, lifestyle and heart disease rates in the early 1950s the Seven Countries Study took off in 1958. This study established relationships between risk factors and development of heart disease in middle aged men in health examined in countries with cultures we demonstrated to contrast in diet and lifestyle. The results obtained in the Seven Countries Study from its inception till now are presented in this book entitled *Prevention of coronary heart disease: Diet, lifestyle and risk factors in the Seven Countries Study*. Long ago I realized that our concern should not be restricted to the prevention of coronary heart disease but should be extended to all diseases and premature death. *American Medical Association Complete Guide to Prevention and Wellness*, 2008-10-01. Stroke Prevention in Clinical Practice Daryll M. Baker, 2007-11-24. Stroke is a brain attack and a major cause of disability and the third biggest killer. Active intervention can prevent stroke, especially in high risk groups. Patients who have transient ischaemic attacks (TIAs) are at an increased risk of stroke and should be targeted. Primary care physicians are the first to diagnose the TIA and are therefore vital in helping reach these people; they are the doctors who can undertake a considerable amount of stroke prevention treatment. *Stroke Prevention in Clinical Practice* fills the need for a short, clear text to explain how to accurately diagnosis a TIA, determine what investigations are indicated, and how and when to intervene to reduce the risk of stroke. Short chapters written in point form with clear diagrams and figures, each chapter written by an expert in the field. **LDL... the Silent Killer** Max L. Fields, 2006-05. Strokes and heart attacks are the greatest threats to people's health.
