The Coconut Palm (*Cocos nucifera* L.) - Research and Development Perspectives V. Krishnakumar, P. K.

Thampan, M. Achuthan Nair, 2019-02-15 Since the publication of The coconut palm A monograph in 1960 considerable information has been accrued on the crop through work at research institutes international organisations and development agencies Although coconut cultivation is spread over 93 countries providing employment and creating livelihood opportunities to 64 million families around the globe smallholder coconut farmers are now facing numerous challenges The wide gap between the potential and actual yield is a major concern and as such it is necessary to disseminate knowledge in order to implement research findings Coconut research in India one of the leading coconut producing countries is celebrating its centenary making this an opportune time to review the research and development advances and the relevant technologies This detailed comprehensive book covers all aspects of coconut from the origins to cultivation breeding physiology and value addition as well as subjects of topical interest like nutrition and health biotechnology and climate change and carbon sequestration Written by leading experts in the fields it emphasises that the livelihood of the small coconut landholders is the ultimate aim of scientists and developmental agencies and outlines various important strategies to make coconut farming more remunerative globally It discusses work in all the major coconut growing countries and outlines suggestions for international cooperation Research work on the crop is comparatively difficult because of its perennial nature longevity height long juvenile phase large sized nuts cross pollination and seed propagation As these special features necessitate greater investment of resources time and land it is all the more imperative that research is not duplicated and the information and experience becoming available around the world is shared so that it can be fully utilised In this context periodic publications compiling all the available information on coconut assume greater significance This book is therefore of great value to researchers students extension workers developmental agencies and progressive farmers Replanting the Tree of Life G. Persley, 1992 Executive summary origin and importance of the coconut palm World fats and oils market Current research International research priorities Institutional options for international support Next steps The Coconut Steve Adkins, Julianne Biddle, Amirhossein Bazrafshan, Sundaravelpandian Kalaipandian, 2024-01-25 The coconut palm *Cocos nucifera* L is one of the world's most important palms and contributes significantly to the income and livelihood of many people in tropical countries Widely referred to as the tree of life coconut has been used as a source of food drink oil medicine shelter and wood for around 500 years Every part of the coconut palm can be utilized The demand for coconut fruit and its products has increased recently as people have become aware of its nutritional and health benefits especially those of coconut water and virgin coconut oil This book is a key resource for researchers and students in horticulture plant science and agriculture and those interested in the production of tropical crops and practitioners in the coconut industry

Coconut Genetic Resources Pons Batugal, 2005 *Current Advances in Coconut Biotechnology* C. Oropeza, J.L.

Verdeil,G.R. Ashburner,R. Cardeña,J.M. Santamaría,2013-04-17 The coconut palm occupies a significant place in the world economy as an important subsistence crop in all the areas in which it is grown Relatively few countries are able to export any quantity of coconut products because of increasing home demands coupled with low productivity Yields are generally well below potential despite recent developments with improved planting stock and agronomic practices In the last 50 years both these aspects have received considerable attention but the focus is shifting to investigate how the use of recently developed biotechnological techniques can benefit the coconut industry This volume the result of the International Symposium on Coconut Biotechnology held in December 1997 in Merida Yucatan Mexico describes recent research in three important areas Standard plant breeding techniques used with coconut have produced improved planting material but progress is inevitably very slow Can more rapid genetic improvement be obtained using molecular techniques The papers presented in this section suggest that such techniques will open up exciting new prospects but only after basic information has been gathered on the genetic status of existing coconut stocks Research using microsatellite techniques seems to provide a useful tool to help to classifying these stocks However only a combination of classical breeding methods with modern techniques will lead to the rapid improvement which is required to supply material for urgent replanting programs *Research and Development of*
