Rethinking the Unthinkable

Some experts want to apply recent neuroscience research to prevent poor decision making that could lead to nuclear war.

By SARAH KOLES

Nuclear war has returned to the realm of distant table conversations, weighing on the minds of the public more than it has in a generation.

It's not just "Oppenheimer's" big bang at the box office. Since Russia's invasion of Ukraine, the country's officials have made nuclear threats. Russia has also threatened its participation in a nuclear arms control treaty with the United States. North Korea has launched destructive missiles. The United States, which is modernizing its nuclear weapons, also shows a surveillance

satellite from China, which is building up its missile arsenal.

"The threat of nuclear war today, I believe, is as high as it has ever been in the nuclear age," said John R. Belling, president and chief operating officer of the Nuclear Threat Initiative, an influential nonprofit group in Washington.

In this moment of crisis, a controversial, cross-party risk of having nuclear war is a significant risk of having nuclear war. It is a risk that a world leader is deciding to launch a nuclear attack. And that decision-making process must be better understood.

Historically, scholarship on nuclear decision-making grew out of economic theory, where analysts have often irrationally assumed that a "rational actor" is making decisions.

"We all know that humans make mistakes," Mr. Belling said. "We don't always have good judgment. We behave differently under stress. And there are no easy examples of human behavior over the course of history. Why do we think it's going to be any different with nuclear?"

But growing scientific understanding of decision-making is making it

Bees Whose Buzzing Was Abruptly Silenced Some 3,000 Years Ago

Insects rarely survive in fossilized form, but a mysterious series of events suddenly killed herds of brooding pollinators and reemerged them in their cocoons for three millennia.

The eyes and head of a fossilized bee in a photograph made using a Synchrotron beam.

By SARAH DEBOUGH

A research team was combing the coastline of southwest Portugal in 2009 in search of signs of how its ecosystems had changed over time. They stumbled upon an extraordinary fossilized site: Bees that had died for nearly 3,000 years.

An unlikely series of events had conspired together in this unlikely site of fossilization, a series of events that had happened, it was "un-likely" might be too strong a word, said Caroline Monod, a paleontologist and scientist at the University of Porto, Portugal. These were not typical European bees. They were not typical European bees.

Overreach George C. Edwards, III, 2012-03-25 How Obama overestimated the power of rhetoric and persuasion during his presidency When Barack Obama became president many Americans embraced him as a transformational leader who would fundamentally change the politics and policy of the country Yet two years into his administration the public resisted his calls for support and Congress was deadlocked over many of his major policy proposals How could this capable new president have difficulty attaining his goals Did he lack tactical skills In *Overreach* respected presidential scholar George Edwards argues that the problem was strategic not tactical He finds that in President Obama's first two years in office Obama governed on the premise that he could create opportunities for change by persuading the public and some congressional Republicans to support his major initiatives As a result he proposed a large expensive and polarizing agenda in the middle of a severe economic crisis The president's proposals alienated many Americans and led to a severe electoral defeat for the Democrats in the 2010 midterm elections undermining his ability to govern in the remainder of his term Edwards shows that the president's frustrations were predictable and the inevitable result of misunderstanding the nature of presidential power The author demonstrates that the essence of successful presidential leadership is recognizing and exploiting existing opportunities not in creating them through persuasion When Obama succeeded in passing important policies it was by mobilizing Democrats who were already predisposed to back him Thus to avoid overreaching presidents should be alert to the limitations of their power to persuade and rigorously assess the possibilities for obtaining public and congressional support in their environments
