Best, 2013-05-20 Igneous and metamorphic petrology has over the last twenty years expanded rapidly into a broad multifaceted and increasingly quantitative science Advances in geochemistry geochronology and geophysics as well as the appearance of new analytical tools have all contributed to new ways of thinking about the origin and evolution of magmas and the processes driving metamorphism This book is designed to give students a balanced and comprehensive coverage of these new advances as well as a firm grounding in the classical aspects of igneous and metamorphic petrology. The emphasis throughout is on the processes controlling petrogenesis but care is taken to present the important descriptive information so crucial to interpretation One of the most up to date synthesis of igneous and metamorphic petrology available Emphasis throughout on latest experimental and field data Igneous and metamorphic sections can be used independently if necessary Stratigraphy: A Modern Synthesis Andrew D. Miall,2022-03-02 The updated textbook is intended to serve as an advanced and detailed treatment of the evolution of the subject of stratigraphy from its disparate beginnings as separate studies of sedimentology lithostratigraphy chronostratigraphy etc into a modern integrated discipline in which all components are necessary There is a historical introduction which now includes information about the timeline of the evolution of the components of modern stratigraphy The elements of the various components facies analysis sequence stratigraphy mapping methods chronostratigraphic methods etc are outlined and a chapter discussing the modern synthesis is included near the end of the book which closes with a discussion of future research trends in the study of time as preserved in the stratigraphic record Reservoir quality controls and reservoir modelling of continental to transitional shallow marine sedimentary basins of Southern Nigeria Adamolekun, Olajide Jonathan, 2023-06-05 The object based stochastic approach in facies modelling is important in the construction of geologically consistent 3 D reservoir models and in constraining the distribution of petrophysical properties Tortuosity factor facies porosity and cementation factor constitute major uncertainties in the generated 3 D static model of the Niger Delta Basin Reservoir quality in the Dahomey Basin is mainly controlled by detrital
