Towards an Ecological Intellectual Property David J Jefferson, 2020-06-08 This book focuses on analysing how legal systems set the terms for interactions between human beings and plants The story that the book recounts is one of experimental lawmaking in Ecuador a country where over the past decade governmental officials and civil society advocates have attempted to reconfigure how human individuals and institutions relate to nature by following an eco centric approach to lawmaking In doing so Ecuadorian legislators administrators and judges have taken seriously the ontologies of non human entities including plants through a process that has required the continuous navigation of tensions with certain logics that pervade conventional legal regimes The book endeavours to disrupt these conventional assumptions and approaches to lawmaking by taking seriously alternative strategies to reconstitute interactions between people and plants In doing so the book argues in favour of an ecological turn in laws that govern vegetal life The analysis is based on a close examination of the experiences that lawmakers in Ecuador have had when experimenting with innovative approaches to re form relationships between human and non human beings Concretely these experiments have yielded constitutional legislative and regulatory changes that inform the inquiry of how intellectual property and plant genetic resources laws both in Ecuador and worldwide could become more ecological in nature The argument that the book develops is based on extensive ethnographic fieldwork and empirical research in Ecuador complemented by archival and doctrinal legal analysis The contents of the book will be of interest to an academic audience of legal scholars and postgraduate students in law in addition to scholars and students in the fields of anthropology sociology socio legal studies and science and technology studies

Participatory Plant Breeding: Concept and Applications Atul Bhargava, Shilpi Srivastava, 2019-04-13 Plant breeding has played a significant role in the development of human civilizations Conventional plant breeding has significantly improved crop yield by genetically manipulating agronomically important traits However it has often been criticized for ignoring indigenous germplasm failing to address the needs of the marginal and the poor farmers and emphasizing selection for broad instead of local adaptation Participatory plant breeding PPB is the process by which the producers and other stakeholders are actively involved in a plant breeding programme with opportunities to make decisions throughout The Working Group on Participatory Plant Breeding PPBwg was established in 1996 under the framework of the Consultative Group on International Agricultural Research CGIAR Research in PPB can promote informed participation and trust in research among consumers and producers and in recent years PPB has had a significant impact on food production by quickly and cost effectively producing improved crop varieties At the same time there has been significant research in the area PPB offers significant advantages that are particularly relevant to developing countries where large

investments in plant breeding have not led to increased production especially in the marginal environments In addition to the economic benefits participatory research has a number of psychological moral and ethical benefits which are the consequence of a progressive empowerment of the farming communities PPB can empower groups such as women or less well off farmers that are traditionally left out of the development process This book explores the potential of PPB in the coming decades The topic is more relevant since international breeding efforts for major crops are aimed at decentralizing local breeding methods to better incorporate the perspective of end users into the varietal development process The first book incorporating the upcoming research on this novel breeding approach it reviews the important tools and applications of PPB in an easy to read succinct format with illustrations to clarify these complex topics It provides readers with a basic idea of participatory plant breeding as well as advances in the field and insights into the future to facilitate the successful integration of farmers into breeding programmes This book is a valuable reference resource for agriculturists agricultural advisers policy makers NGOs post doctoral students and scientists in agriculture horticulture forestry and botany
