Making Nature, Shaping Culture, 1995-01-01 For ages farmers have domesticated plant varieties while scientists have made nature through hybridization and other processes This give and take mediated through negotiations persuasion the marketplace and even coercion has resulted in what we call nature and has led to a homogenization of plant crops Yet homogenization has led to new problems genetic vulnerability and the lack of systems to maintain plant germplasm of varieties no longer grown in the fields This book addresses issues previously viewed as primarily technical concerning the germplasm debate that is how what and where to store the range of genetic materials necessary to reproduce plants By examining Brazil Chile France and the United States the authors show how different cultures respond to the decline in genetic diversity The findings show that the quest for uniformity in foods agriculture and environment eventually threatens everyone The politicization of this debate is inevitable because the destruction of human cultural diversity goes hand in hand with the destruction of plant varietal diversity The authors agree that responses to the controversies must involve food security relinking of food with agriculture and the environment revaluing traditional knowledge and rethinking development They stress that answers will be found not by experts acting unilaterally but through the democratization of scientific and technical exchange Lawrence Busch is professor of sociology at Michigan State University William B Lacy is director of the Cooperative Extension Service at Cornell University Jeffrey Burkhardt is a professor of agricultural economics at the Institute for Food and Agricultural Sciences at the University of Florida Douglas Hemken is a Ph D candidate in the Department of Rural Sociology at the University of Wisconsin Jubel Moraga Rojel is professor of sociology at the Universidade Australe del Chile Timothy Koponen is a Ph D candidate in sociology at Northwestern University and Josi de Souza Silva is with the Commission on Plant Genetic Resources at FAO in Rome

Marer,Mark Grimes,1992 Focuses on safe techniques for using the minimum amount of wood preservation chemicals necessary to protect wood from rot and insect damage whether in the mill at local construction sites or on boats DPR test material QAL and QAC Gardening with Heirloom Seeds (Volume 2 of 2) (EasyRead Super Large 20pt Edition) , **Shattering** Cary Fowler,Patrick R. Mooney,1990 It was through control of the shattering of wild seeds that humans first domesticated plants Now control over those very plants threatens to shatter the world s food supply as loss of genetic diversity sets the stage for widespread hunger Large scale agriculture has come to favor uniformity in food crops More than 7 000 U S apple varieties once grew in American orchards 6 000 of them are no longer available Every broccoli variety offered through seed catalogs in 1900 has now disappeared As the international genetics supply industry absorbs seed companies with nearly one thousand takeovers since 1970 this trend toward uniformity seems likely to continue and as third world agriculture is brought in line with international business interests the gene pools of humanity s most basic foods are threatened The consequences are more than culinary Without the genetic diversity from which farmers traditionally breed for resistance to diseases crops are more susceptible to the spread of pestilence Tragedies like the Irish Potato Famine may be thought of today as ancient history yet the U S corn blight of 1970 shows that technologically based agribusiness is a breeding ground for disaster Shattering reviews the development of genetic diversity over 10 000 years of human agriculture then exposes its loss in our lifetime at the hands of political and economic forces The possibility of crisis is real this book shows that it may not be too late to avert it
