Selected Papers Herbert Robbins, 2012-12-06 Herbert Robbins is widely recognized as one of the most creative and original mathematical statisticians of our time The purpose of this book is to reprint on the occasion of his seventieth birthday some of his most outstanding research In making selections for reprinting we have tried to keep in mind three potential audiences 1 the historian who would like to know Robbins' seminal role in stimulating a substantial proportion of current research in mathematical statistics 2 the novice who would like a readable conceptually oriented introduction to these subjects and 3 the expert who would like to have useful reference material in a single collection In many cases the needs of the first two groups can be met simultaneously A distinguishing feature of Robbins' research is its daring originality which literally creates new specialties for subsequent generations of statisticians to explore Often these seminal papers are also models of exposition serving to introduce the reader in the simplest possible context to ideas that are important for contemporary research in the field An example is the paper of Robbins and Monro which initiated the subject of stochastic approximation We have also attempted to provide some useful guidance to the literature in various subjects by supplying additional references particularly to books and survey articles with some remarks about important developments in these areas

Cohen, J.J. Stachel, 2012-12-06 The decision to undertake this volume was made in 1971 at Lake Como during the Varenna summer school of the Italian Physical Society where Professor

Leon Rosenfeld was lecturing on the history of quantum theory. We had long been struck by the unique blend of epistemological, historical and social concerns in his work on the foundations and development of physics and decided to approach him there with the idea of publishing a collection of his papers. He responded enthusiastically and agreed to help us select the papers. Furthermore, he also agreed to write a lengthy introduction and to comment separately on those papers that he felt needed critical re-evaluation in the light of his current views. For he was still vigorously engaged in both theoretical investigations of and critical reflections on the foundations of theoretical physics. We certainly did conceive of the volume as a memorial to a living saint but rather more practically as a useful tool to place in the hands of fellow workers and students engaged in wrestling with these difficult problems. All too sadly fate has added a memorial aspect to our labors. We agreed that in order to make this book most useful for the contemporary community of physicists and philosophers we should translate all non-English items into English.

Classic Papers in Rheumatology Paul Dieppe, Frank A. Wollheim, H. Classic Papers in Geriatric Medicine with Current Commentaries Robert J. Pignolo, Monica Crane, Mary Ann Forciea, 2010-04-28 The field of geriatrics foundations is rooted in the classic papers of early descriptions of aging and age related diseases In Classic Papers in Geriatric Medicine

with Current Commentaries the authors chose the classic papers providing a combination of expert opinion and objective assessment. The 15 areas in this volume represent the beginnings of practice and thoughts about the best ways to care for older patients. Each paper is introduced by a commentary describing the singular contributions of the chosen paper with a short list of other important early papers in that area and in many cases reflect on progress in that particular field. The commentaries are personal statements by the authors about the influence of the papers chosen, not meant to be exhaustive reviews of the clinical area in question. Classic Papers in Geriatric Medicine with Current Commentaries exemplifies the importance of a paper and its ability to retain its impact over time. While many of the classic papers in this collection have stood the test of time, others have gained classic status by virtue of their profound influence in relatively quick measure or because of timeliness in filling a void in knowledge.
