Shocks in Astrophysics T.J. Millar, A.C. Raga, 2012-12-06 This volume contains the proceedings of an international conference on Shocks in Astrophysics held at UMIST Manchester England from January 9-12 1995 The study of interstellar and circumstellar gas dynamics has a long and distinguished history in Manchester and has been almost entirely concentrated in the school founded by Franz Kahn in the Astronomy Department University of Manchester In January 1993 one of us AR was appointed to the faculty of the Astrophysics Group in the Department of Mathematics at UMIST and astrophysical gas dynamics became a major interest of the Group The subject of this conference was chosen partly for the topicality of the subject matter and partly to help synthesise this expertise with the expertise in interstellar chemistry already present in the Group The first fruits of this synthesis are contained in this volume As it happened this conference celebrated not so much the beginnings of a long and fruitful collaboration but rather gave many of Alex's friends the chance to say a fond farewell as he departed UMIST at the end of January 1995 to take up a chair at UNAM Mexico City The core of this volume consists of twelve review articles marked R in the list of contents incorporating observational and theoretical studies of shock waves in a variety of situations from Herbig Haro objects to Supernova Remnants to Active Galactic Nuclei We have also included the contributed C and poster P papers

Shock Fitting Marcello Onofri, Renato Paciorri, 2017-11-18 This book describes the revolutionary capabilities of new shock fitting algorithms a great improvement in computational fluid dynamics CFD for high speed numerical simulations Shock fitting methods provide a solution to the current difficulties and inaccuracies in shock capturing approaches This work traces the evolution of shock fitting methods from the pioneering methods based on the structured grids boundary and floating shock fitting to recent developments on unstructured grids illustrating algorithmic details significant applications and potential developments Also to celebrate the centenary birth of the father of shock fitting techniques the book also includes a tribute to Gino Moretti as well as his unpublished manuscript This book will appeal to professionals researchers and graduate students in the field of CFD

Front Tracking for Hyperbolic Conservation Laws Helge Holden, Nils Henrik Risebro, 2015-12-10 This is the second edition of a well received book providing the fundamentals of the theory hyperbolic conservation laws Several chapters have been rewritten new material has been added in particular a chapter on space dependent flux functions and the detailed solution of the Riemann problem for the Euler equations Hyperbolic conservation laws are central in the theory of nonlinear partial differential equations and in science and technology The reader is given a self contained presentation using front tracking which is also a numerical method The multidimensional scalar case and the case of systems on the line are treated in detail A chapter on finite differences is included From the reviews of the first edition It is already one of the few best digests on this topic The present book is an excellent compromise between theory and practice Students will appreciate the lively and accurate style D Serre MathSciNet I have read the book with great pleasure and I can recommend it to experts as well as students It can also

be used for reliable and very exciting basis for a one semester graduate course S Noelle Book review German Math Soc Making it an ideal first book for the theory of nonlinear partial differential equations an excellent reference for a graduate course on nonlinear conservation laws M Laforest Comp Phys Comm Generic EIS for Nuclear Power Plant Operating Licenses Renewal ,1996 The Origin of Stars and Planetary Systems Charles J. Lada,N.D. Kylafis,1999-07-31 The Origin of Stars and Planetary Systems is a collection of tutorial reviews that critically and systematically discuss the current state of our knowledge of star formation and early stellar evolution from the genesis of giant molecular clouds to the birth of young stars and their surrounding planetary systems The chapters are written at the graduate student level by a group of twenty internationally distinguished scientists The emphasis is on fundamentals rather than recent research results The book thus provides a rigorous treatment of the basic empirical and theoretical foundations of modern star formation research The book is a unique reference based on the authors own pioneering research Readership Primary or supplementary text for graduate courses on star formation Basic reference for professional scientists needing a solid background in the area **Nonlinear Hyperbolic Equations — Theory, Computation Methods, and Applications** Josef Ballmann,Rolf Jeltsch,2013-03-08 On the occasion of the International Conference on Nonlinear Hyperbolic Problems held in St Etienne France 1986 it was decided to start a two years cycle of conferences on this very rapidly expanding branch of mathematics and its applications in Continuum Mechanics and Aerodynamics The second conference took place in Aachen FRG March 14 18 1988 The number of more than 200 participants from more than 20 countries all over the world and about 100 invited and contributed papers well balanced between theory numerical analysis and applications do not leave any doubt that it was the right decision to start this cycle of conferences of which the third will be organized in Sweden in 1990 This volume contains sixty eight original papers presented at the conference twenty two of them dealing with the mathematical theory e.g. existence uniqueness stability behaviour of solutions physical modelling by evolution equations Twenty two articles in numerical analysis are concerned with stability and convergence to the physically relevant solutions such as schemes especially devised for treating shocks contact discontinuities and artificial boundaries Twenty four papers contain multidimensional computational applications to nonlinear waves in solids flow through porous media and compressible fluid flow including shocks real gas effects multiphase phenomena chemical reactions etc The editors and organizers of the Second International Conference on Hyperbolic Problems would like to thank the Scientific Committee for the generous support of recommending invited lectures and selecting the contributed papers of the conference *The Log* ,1938 *Astrochemistry of Cosmic Phenomena* P.D. Singh,2012-12-06 The IAU symposium No 150 Astrochemistry of Cosmic Phenomena was held at the beautiful and scenic town of Campos do Jordao Sao Paulo Brazil from August 5 to 9 1991 and was attended by 111 registered participants with 17 accompanied guests from 19 countries The symposium had a wide ranging discussion of the chemistry of astronomical environments with an emphasis on the description of molecular processes that critically influence the nature

and evolution of astronomical objects and the identification of specific observations that directly address significant astronomical questions The subject areas of the symposium included atomic and molecular processes at low and high temperatures and photon interactions the chemical structure of molecular clouds in the Milky Way and in external galaxies the chemistry of outflows and their interactions with the interstellar medium the chemical connections between the interstellar medium and the solar system and pregalactic chemistry The scientific programme comprised of review talks and contributed papers with a general introduction by Professor A Dalgarno and a final overview of the whole symposium by Professor D A Williams Financial supports from the Sao Paulo State Foundation Support FAPESP Brazilian National Research Council CNPq Finance Company of Studies and Projects FINEP Institute of Astronomy and Geophysics of University of Sao Paulo IAG USP and International Astronomical Union IAU are gratefully acknowledged I am greatly indebted to Professor A

Interstellar Processes D.J. Hollenbach,Harley A. Thronson Jr.,2012-12-06 The idea for an international symposium on the interstellar medium was first discussed at the University of Wyoming during the summer of 1984 It was obvious that the outstanding natural beauty of the Teton mountain range in northwestern Wyoming must be matched by a meeting with the broadest appeal to the astronomical community If the meeting was to produce a book it must likewise be an important contribution to the astronomical literature It was for these reasons that early in the discussions it was decided that the University should host a school with the invited speakers presenting tutorials on a broad range of topics involving the interstellar medium The symposium proceedings would then be a compilation of the written versions of these presentations It has been nearly a decade since Lyman Spitzer published his classic text on the interstellar medium and we felt the need for a school and book that would focus on the recent developments in our understanding of the inter stellar medium Thus we view this two volume set as an adjunct text to Spitzer s book

Modeling, Simulation and Optimization of Complex Processes Hans Georg Bock,2005-02-14 This proceedings volume contains a selection of papers presented at the symposium International Conference on High Performance Scientific Computing held at the Hanoi Institute of Mathematics of the Vietnam National Center for Natural Science and Technology NCST March 10 14 2003 The conference has been organized by the Hanoi Institute of Mathematics SFB 359 Reactive Flows Transport and Diffusion Heidelberg Ho Chi Minh City University of Technology and Interdisciplinary Center for Scientific Computing IWR Heidelberg The contributions cover the broad interdisciplinary spectrum of scientific computing and present recent advances in theory development of methods and applications in practice Subjects covered are mathematical modelling numerical simulation methods for optimization and optimal control parallel computing symbolic computing software development applications of scientific computing in physics chemistry biology and mechanics environmental and hydrology problems transport logistics and site location communication networks production scheduling industrial and commercial problems

ROS Regulation during Plant Abiotic Stress Responses Zhulong Chan,Chun-Peng Song,Woe Yeon Kim,Ken Yokawa,2017-02-08 Plants are continuously exposed to a wide

range of environmental conditions including cold drought salt heat which have major impact on plant growth and development To survive plants have evolved complex physiological and biochemical adaptations to cope with a variety of adverse environmental stresses Among them reactive oxygen species ROS are key regulators and play pivotal roles during plant stress responses which are thought to function as early signals during plant abiotic stress responses ROS were long regarded as unwanted and toxic by products of physiological metabolism However ROS are now recognized as central players in the complex signaling network of cells Therefore a fine tuning control between ROS production and scavenging pathways is essential to maintain non toxic levels in planta under stressful conditions through enzymatic and non enzymatic antioxidant defense systems We focus on the roles of ROS during plant abiotic stress responses in this Research Topic Plant responses to multiple abiotic stresses and effects of hormones and chemicals on plant stress responses have been carefully studies Although functions of several stress responsive genes have been characterized and possible interactions between hormones and ROS are discussed future researches are needed to functionally characterize ROS regulatory and signaling transduction pathways
