Long Orbit:

Brute Orbits George Zebrowski, 2014-04-01 Like his previous tales of technocratically engineered futures *Macrolife* *Stranger Suns* etc Zebrowski's latest evokes the pioneering SF of social philosopher Olaf Stapledon In the 21st century Earth incarcerates its undesirables in mined out asteroids launched into new orbits for the duration of their sentences This use of distance as a better prison wall is more than just an ingenious application of technology to the penal system it's also a convenient trick for disposing of the socially misfit since orbits are accidentally miscalculated to prevent their return The narrative follows the histories of several of these rocks as their prisoners fight unite and ultimately set out to create superior self contained cultures free of the taint of earthly ways Individual asteroids house specific groups of offenders ranging from hardened convicts to sexual deviants juvenile delinquents and unwanted foreigners Zebrowski argues his points with conviction Publishers Weekly A brilliant and dramatic philosophical reflection on the nature of society technology and humanity itself Zebrowski is a deep thinker who writes about the big questions in the grand tradition of Wells Stapledon and Clarke Jack M Dann award winning author of *The Silent* and *The Memory Cathedral* *High Crimes Call for High Punishment* It is the twenty first century Convicts are sentenced to asteroids that move in ever widening solar orbits timed to return when their terms run out But a few ambitious administrators discover that small errors in velocity can rid them of selected groups altogether the hardcore violent the mentally defective and especially the political dissidents Enduring the black void of interstellar space time these human rejects men and women mixed together create their own Darwinian societies struggling to survive Back on Earth a handful of sympathetic and curious scientists have not forgotten these lost citizens When a technological breakthrough makes it possible to overtake these scattered asteroids a courageous team sets out to go where none has willingly gone before What they discover in these brute orbits is both provocative and moving a startling vision of humanity you will never forget

The Militarization and Weaponization of Space Matthew Mowthorpe, 2004-01-01 The militarization of space began as a rivalry between the United States and the Soviet Union and grew to enormous proportions during the height of the Cold War Satellite reconnaissance navigation and weapons guidance and electronic intelligence comprise only a few of the efforts taken to militarize and dominate space Today as the prominence of information technology computing and telecommunications advances so does the concept of space as a battlefield In *The Militarization and Weaponization of Space* Matthew Mowthorpe diligently analyzes the military space policies of the United States the Soviet Union Russia and the People's Republic of China from the Cold War period to the present day Mowthorpe focuses on the development of the ballistic missile defense and other anti satellite systems and aptly assesses to what degree space will become armed This work cogently addresses an issue of increasing urgency to scholars of international politics

operations beyond the radiation belts of exploiting in situ resources either on the lunar surface or on asteroids retrieved to the vicinity of the Earth and of mitigating the space debris concern by taking advantage of the lunar perturbation The characteristic dynamics in the cislunar space represents an opportunity for the mission designer but also a challenge in terms of theoretical understanding and operational control This Research Topic covers the Earth Moon dynamics in its complexity and allure considering the most relevant aspects for both natural and artificial objects in order to get a new comprehension of the dynamics at stake along with the operational procedures that can handle it

Supersymmetry and Trace Formulae Igor V. Lerner,Jonathan P. Keating,David E. Khmelnitskii,2012-12-06 The motion of a particle in a random potential in two or more dimensions is chaotic and the trajectories in deterministically chaotic systems are effectively random It is therefore no surprise that there are links between the quantum properties of disordered systems and those of simple chaotic systems The question is how deep do the connections go And to what extent do the mathematical techniques designed to understand one problem lead to new insights into the other The canonical problem in the theory of disordered mesoscopic systems is that of a particle moving in a random array of scatterers The aim is to calculate the statistical properties of for example the quantum energy levels wavefunctions and conductance fluctuations by averaging over different arrays that is by averaging over an ensemble of different realizations of the random potential In some regimes corresponding to energy scales that are large compared to the mean level spacing this can be done using diagrammatic perturbation theory In others where the discreteness of the quantum spectrum becomes important such an approach fails A more powerful method developed by Efetov involves representing correlation functions in terms of a supersymmetric nonlinear sigma model This applies over a wider range of energy scales covering both the perturbative and non perturbative regimes It was proved using this method that energy level correlations in disordered systems coincide with those of random matrix theory when the dimensionless conductance tends to infinity
