Harris, 2023-05-09 Since the start of biological studies using the transmission electron microscope scientists have sought to develop procedures for the preparation and investigation of the thinly spread specimens of biological particulates Negative Staining and Cryoelect *The Principles and Practice of Electron Microscopy* Ian M. Watt, 1997-01-30 The first edition of this book was widely praised as an excellent introduction to electron microscopy for materials scientists physicists earth and biological scientists This completely revised new edition contains expanded coverage of existing topics and much new material The author presents the subject of electron microscopy in a readable way open both to those inexperienced in the technique and also to practising electron microscopists The coverage has been brought completely up to date whilst retaining descriptions of early classic techniques Currently live topics such as computer control of microscopes energy filtered imaging cryo and environmental microscopy digital imaging and high resolution scanning and transmission microscopy are all described The highly praised case studies of the first edition have been expanded to include some interesting new examples This indispensable guide to electron microscopy written by an author with thirty years practical experience will be invaluable to new and experienced electron microscopists in any area of science and technology

Immunocytochemistry and In Situ Hybridization in the Biomedical Sciences Julian E. Beesley, 2012-12-06

Immunocytochemistry and in situ hybridization are widely used biomedical sciences They are essential in medical diagnosis and in cell biology research Affinity labeling is the central goal of the experimental strategy involving a series of techniques in a logical order from the effects of specimen fixation through specimen preparation to expose the antigen to optimizing immunolabeling to assessing the result and finally to safety considerations Numerous examples of these techniques in biomedical sciences are included as well as experimental assays and practical tips This survey of methods will serve as an invaluable reference source in any laboratory setting academic industrial or clinical involved in research in almost every branch of biology or medicine as well as in pharmaceutical biotechnological and clinical applications *Experimental Cell Biology of Taste and Olfaction* Andrew I. Spielman, Joseph G. Brand, 1995-07-12 *Experimental Cell Biology of Taste and Olfaction* examines and adapts methods from a variety of established fields such as neurophysiology receptor biochemistry and cellular imaging to provide comprehensive coverage of current techniques and protocols in chemosensory cell biology Written for both newcomers and established scientists this volume offers numerous tips for problem solving and suggests ways to avoid the most common and costly mistakes made by researchers This book covers general aspects such as tissue

collection and preparation as well as specific up to date methods used in taste and olfactory morphology immunology biochemistry biophysics electrophysiology and molecular biology The explosion of knowledge and the increased interest in these areas make this book an important reference work for all scientists students and teachers in this and related fields

Cell-Penetrating Peptides Ulo Langel, 2002-05-29 One of the major problems with drug delivery is the inability of large

hydrophilic compounds to pass through the lipid membrane of the cell thus making drugs such as polypeptides and oligonucleotides of limited therapeutic value Until recently the transport of such molecules into the cytoplasmic and nuclear compartments of living cells seemed a

Edible Nanostructures Alejandro G Marangoni, David Pink, 2015-10-20 Food Scientists have been teaching the subject in the same way for the past fifty years This book therefore aims to modernise the coverage of the subject bringing it in line with the recent and extensive developments in Materials Science in particular the field of supramolecular chemistry of food components has been generally overlooked in textbooks *Edible Nanostructures* will summarise developments in the areas of protein aggregation and gelation starch crystallography emulsions and fat crystal network nanostructure and microstructure addressing their functionalities in food Each chapter offers both the qualitative view and a basic quantitative treatment of the area including basic models used to describe structure and its relationship to functionality if they exist This is the first book on nanostructures in foods and is suitable as a textbook for undergraduate students in Chemistry Physics and Food Science

Cumulated Index Medicus ,1991 **Low-temperature Biological Microscopy and Analysis I.** ,1990 *Handbook of Sample Preparation for Scanning Electron Microscopy and X-Ray Microanalysis* Patrick Echlin, 2011-04-14 Scanning electron microscopy SEM and x ray microanalysis can produce magnified images and in situ chemical information from virtually any type of specimen The two instruments generally operate in a high vacuum and a very dry environment in order to produce the high energy beam of electrons needed for imaging and analysis With a few notable exceptions most specimens destined for study in the SEM are poor conductors and composed of beam sensitive light elements containing variable amounts of water In the SEM the imaging system depends on the specimen being sufficiently electrically conductive to ensure that the bulk of the incoming electrons go to ground The formation of the image depends on collecting the different signals that are scattered as a consequence of the high energy beam interacting with the sample Backscattered electrons and secondary electrons are generated within the primary beam sample interactive volume and are the two principal signals used to form images The backscattered electron coefficient increases with increasing atomic number of the specimen whereas the secondary electron coefficient is relatively insensitive to atomic number This fundamental difference in the two signals can have an important effect on the way samples may need to be prepared The analytical system depends on collecting the x ray photons that are generated within the sample as a consequence of interaction with the same high energy beam of primary electrons used to produce images

NBS Special Publication ,1968 *Plant Nutrition — from Genetic Engineering to Field Practice* J. Barrow, 2012-12-06 Plant Nutrition From Genetic Engineering to Field Practice the 12th International Colloquium on Plant Nutrition is the latest in a series which began in 1954 Early meetings were mainly concerned with the practical problems of soil fertility with soil assessment fertilizer requirements and methods of analysis As the colloquia have progressed the emphasis has slowly changed The practical problems are still important but there is increasing emphasis on plant physiology plant biochemistry membrane biochemistry

and even on the chemistry of genes which control the proteins which transfer nutrient ions to the inside of cells. The meetings therefore provide a valuable opportunity for each half of the science of plant nutrition to interact with and learn from the other half. This volume begins with five papers which review current knowledge in important fields: the rhizosphere, molecular biology, electron microscopy, location and function of elements in vivo and modelling nutrient responses in the field. These themes are continued in groups of shorter papers which follow. In addition, there are sections on nutrient dynamics and partitioning, diagnostic techniques, plant survival strategies, mycorrhizas and on nutrients such as P, N, S, K, Ca, Mg and micronutrients. A large section is devoted specifically to boron, reflecting the considerable current interest in this element. In total, there are 177 refereed papers providing both a broad overview and a detailed picture of the latest developments in pure and applied plant nutrition.
