Lower Manhattan A History Map:

Extracting Spatial Information from Historical Maps Benedikt Budig, 2018-11-23 Historical maps are fascinating documents and a valuable source of information for scientists of various disciplines. Many of these maps are available as scanned bitmap images but in order to make them searchable in useful ways a structured representation of the contained information is desirable. This book deals with the extraction of spatial information from historical maps. This cannot be expected to be solved fully automatically since it involves difficult semantics but is also too tedious to be done manually at scale. The methodology used in this book combines the strengths of both computers and humans; it describes efficient algorithms to largely automate information extraction tasks and pairs these algorithms with smart user interactions to handle what is not understood by the algorithm. The effectiveness of this approach is shown for various kinds of spatial documents from the 16th to the early 20th century.

A History of America in 100 Maps Susan Schulten, 2018-09-21 Throughout its history America has been defined through maps. Whether made for military strategy or urban reform to encourage settlement or to investigate disease, maps invest information with meaning by translating it into visual form. They capture what people knew, what they thought they knew, what they hoped for, and what they feared. As such, they offer unrivaled windows onto the past. In this book Susan Schulten uses maps to explore five centuries of American history from the voyages of European discovery to the digital age. With stunning visual clarity *A History of America in 100 Maps* showcases the power of cartography to illuminate and complicate our understanding of the past. Gathered primarily from the British Library's incomparable archives and compiled into nine chronological chapters, these one hundred full color maps range from the iconic to the unfamiliar. Each is discussed in terms of its specific features as well as its larger historical significance in a way that conveys a fresh perspective on the past. Some of these maps were made by established cartographers while others were made by unknown individuals such as Cherokee tribal leaders, soldiers on the front, and the first generation of girls to be formally educated. Some were tools of statecraft and diplomacy and others were instruments of social reform or even advertising and entertainment. But when considered together, they demonstrate the many ways that maps both reflect and influence historical change. Audacious in scope and charming in execution, this collection of one hundred full color maps offers an imaginative and visually engaging tour of American history that will show readers a new way of navigating their own worlds.

On the Map Simon Garfield, 2013-11-05 Examines the pivotal relationship between mapping and civilization, demonstrating the unique ways that maps relate and realign history and shares engaging cartography stories and map lore.
