Damiano ,Mariana Farina,2025-08-18 Given the success of the *Maternal Fetal Interface New Insight in Placenta Research* we are pleased to announce the launch of Volume II The placenta is a fascinating and ephemeral organ of

life which fulfils several functions to create and maintain optimal in utero conditions for fetal development and programming During its short period of time in the intrauterine cavity the fetus is dependent on the placenta as a lung liver and kidneys Functionally the placenta is a highly specialized organ which represents the interface between the mother and the fetus and is essential for fetal development and growth Apart from enabling oxygen and nutrient exchange the placenta produces various hormones neurotransmitters and other factors that regulate fetal development Extensive research over the last three decades has shown that a balanced interplay of genetic epigenetic and environmental factors is critical and must be maintained during the whole period of gestation so that the architecture and programming of a growing fetus can develop properly Nevertheless physiological alterations or insults occurring during pregnancy such as pathologies medication malnutrition may disrupt this balance and lead to poor pregnancy outcomes The timing of internal external alterations in pregnancy will result in different effects on fetal development and or programming This Research Topic will bring together research that addresses the new insights in maternal fetal interface research in health and disease We welcome original research articles clinical studies reviews and perspectives toward understanding the Maternal Fetal interface Specific themes include but are not limited to 1 Transport and metabolism of placenta 2 Transcriptome and epigenome of trophoblast 3 Pregnancy diseases 4 Metabolism studies on placenta organoids 5 Lipidomic on Health and Diseases of Pregnancy 6 COVID pregnancy and vaccines 7 Animal and cell models for study of pregnancy pathologies 8 Biology of trophoblast 9 Extracellular vesicles in pregnancy 10 Role of placenta in fetal programming 11 Brain placental axis

Agents of Subversion John P. Delury, 2022-10-15 Agents of Subversion reconstructs the remarkable story of a botched mission into Manchuria showing how it fit into a wider CIA campaign against Communist China and highlighting the intensity and futility of clandestine operations to overthrow Mao In the winter of 1952 at the height of the Korean War the CIA flew a covert mission into China to pick up an agent Trained on a remote Pacific island the agent belonged to an obscure anti communist group known as the Third Force based out of Hong Kong The exfiltration would fail disastrously and one of the Americans on the mission a recent Yale graduate named John T Downey ended up a prisoner of Mao Zedong s government for the next twenty years Unraveling the truth behind decades of Cold War intrigue John Delury documents the damage that this hidden foreign policy did to American political life The US government kept the public in the dark about decades of covert activity directed against China while Downey languished in a Beijing prison and his mother lobbied desperately for his release Mining little known Chinese sources Delury sheds new light on Mao s campaigns to eliminate counterrevolutionaries and how the chairman of the Chinese Communist Party used captive spies in diplomacy with the West Agents of Subversion is an innovative work of transnational history and it demonstrates both how the Chinese Communist regime used the fear of special agents to tighten its grip on society and why intellectuals in Cold War America presciently worried that subversion abroad could lead to repression at home
