

"These are enthralling, fascinating, even mind-altering pages.

Alder imbues the narrative with a tremulous, fever-soaked climax and a lengthy and satisfying denouement." — The Boston Globe

Jed Z. Buchwald, A. Franklin

The Measure of All Things Ken Alder, 2014-07-29 In June 1792 amidst the chaos of the French Revolution two intrepid astronomers set out in opposite directions on an extraordinary journey Starting in Paris Jean Baptiste Joseph Delambre would make his way north to Dunkirk while Pierre Fran ois Andr M chain voyaged south to Barcelona Their mission was to measure the world and their findings would help define the meter as one ten millionth of the distance between the pole and the equator a standard that would be used for all people for all time The Measure of All Things is the astonishing tale of one of history's greatest scientific adventures Yet behind the public triumph of the metric system lies a secret error one that is perpetuated in every subsequent definition of the meter As acclaimed historian and novelist Ken Alder discovered through his research there were only two people on the planet who knew the full extent of this error Delambre and M chain themselves By turns a science history detective tale and human drama The Measure of All Things describes a quest that succeeded as it failed and continues to enlighten and inspire to this day The Measure of All Things Ken Alder, 2002 Amidst the chaos of the French Revolution two intrepid astronomers set out in opposite directions from Paris to measure the world one voyaging north to Dunkirk the other south to Barcelona Their findings would help define the meter as one ten millionth of the distance between the pole and the equator a standard that has since swept the planet The Measure of All Things is the astonishing story of one of history s greatest scientific quests a mission to measure the Earth and define the meter for all nations and for all time The Measure of All Things Ken Alder, 2002 In June 1792 the erudite and cosmopolitan Jean Baptiste Joseph Delambre and the cautious and scrupulous Pierre François Andre Mechain set out from Paris one north to Dunkirk the other south to Barcelona to calculate the length of the meter In the face of death threats from village revolutionary councils superstitious peasants and civil war they had only their wits and their letters to each other for support Their findings would be used to create what we now know as the metric system Despite their painstaking and Herculean efforts Mechain made a mistake in his calculations that he covered up The guilty knowledge of his error drove him to the brink of madness and in the end he died in an attempt to correct himself Only then was his mistake discovered Delambre decided to seal all evidence of the error in a vault at the Paris Observatory Two hundred year later historian Ken Alder discovered the truth With scintillating prose and wry wit Alder uses these previously overlooked letters diaries and journals to bring to life a remarkable time when everything was open to question and the light of reason made every dream **Knowing Global Environments** Jeremy Vetter, 2011 Knowing Global Environments brings together seem possible nine leading scholars whose work spans a variety of environmental and field sciences including archaeology agriculture botany climatology ecology evolutionary biology oceanography ornithology and tidology Collectively their essays explore the history of the field sciences through the lens of place practice and the production of scientific knowledge with a wide ranging perspective extending outwards from the local to regional national imperial and global scales The book also shows what the

history of the field sciences can contribute to environmental history especially how knowledge in the field sciences has intersected with changing environments and addresses key present day problems related to sustainability such as global climate biodiversity oceans and more Contributors to Knowing Global Environments reveal how the field sciences have interacted with practical economic activities such as forestry agriculture and tourism as well as how the public has been involved in the field sciences as field assistants students and local collaborators **Enlightenment Biopolitics William Max** Nelson, 2024-05-06 A wide ranging history tracing the birth of biopolitics in Enlightenment thought and its aftermath In Enlightenment Biopolitics historian William Max Nelson pursues the ambitious task of tracing the context in which biopolitical thought emerged and circulated He locates that context in the Enlightenment when emancipatory ideals sat alongside the horrors of colonialism slavery and race based discrimination In fact these did not just coexist Nelson argues they were actually mutually constitutive of Enlightenment ideals In this book Nelson focuses on Enlightenment era visions of eugenics including proposals to establish programs of selective breeding forms of penal slavery and spurious biological arguments about the supposed inferiority of particular groups The Enlightenment he shows was rife with efforts to shape harness and organize the minds and especially the bodies of subjects and citizens In his reading of the birth of biopolitics and its transformations Nelson examines the shocking conceptual and practical connections between inclusion and exclusion equality and inequality rights and race and the supposed improvement of the human species and practices of dehumanization

The 3-D Global Spatial Data Model Earl F. Burkholder, 2008-04-15 Traditional methods for handling spatial data are encumbered by the assumption of separate origins for horizontal and vertical measurements Modern measurement systems operate in a 3 D spatial environment The 3 D Global Spatial Data Model Foundation of the Spatial Data Infrastructure offers a new model for handling digital spatial data the global spatial data model or GSDM The GSDM preserves the integrity of three dimensional spatial data while also providing additional benefits such as simpler equations worldwide standardization and the ability to track spatial data accuracy with greater specificity and convenience This groundbreaking spatial model incorporates both a functional model and a stochastic model to connect the physical world to the ECEF rectangular system Combining horizontal and vertical data into a single three dimensional database this authoritative monograph provides a logical development of theoretical concepts and practical tools that can be used to handle spatial data more efficiently The book clearly describes procedures that can be used to handle both ECEF and flat Earth rectangular components in the context of a rigorous global environment Tides of History Michael S. Reidy, 2009-10-15 In the first half of the nineteenth century the British sought to master the physical properties of the oceans in the second half they lorded over large portions of the oceans outer rim The dominance of Her Majesty's navy was due in no small part to collaboration between the British Admiralty the maritime community and the scientific elite Together they transformed the vast emptiness of the ocean into an ordered and bounded grid In the process the modern scientist emerged Science itself expanded from a limited and local

undertaking receiving parsimonious state support to worldwide and relatively well financed research involving a hierarchy of practitioners Analyzing the economic political social and scientific changes on which the British sailed to power Tides of History shows how the British Admiralty collaborated closely not only with scholars such as William Whewell but also with the maritime community sailors local tide table makers dockyard officials and harbormasters in order to systematize knowledge of the world's oceans coasts ports and estuaries As Michael S Reidy points out Britain's security and prosperity as a maritime nation depended on its ability to maneuver through the oceans and dominate coasts and channels The practice of science and the rise of the scientist became inextricably linked to the process of European expansion the History of Science Bernard Lightman, 2019-11-12 The Wiley Blackwell Companion to the History of Science is a single volume companion that discusses the history of science as it is done today providing a survey of the debates and issues that dominate current scholarly discussion with contributions from leading international scholars Provides a single volume overview of current scholarship in the history of science edited by one of the leading figures in the field Features forty essays by leading international scholars providing an overview of the key debates and developments in the history of science Reflects the shift towards deeper historical contextualization within the field Helps communicate and integrate perspectives from the history of science with other areas of historical inquiry Includes discussion of non Western themes which are integrated throughout the chapters Divided into four sections based on key analytic categories that reflect new approaches in the field The Tyranny of the Straight Line Min-Kyung Lee, 2024-04-02 A revolutionary study of nineteenth century Parisian cartography and its role in shaping a modern conception of space Maps are rarely given the same attention as other print media or art forms in urban history Author Min Kyung Lee shows their rich potential in this lavishly illustrated study which brings together maps and other archival materials along with drawings and paintings She works across disciplines to examine mapping practices in the development of nineteenth century Paris and the transformative role that urban mapping had on the city's modernization Lee investigates Paris's formation as a modern city ultimately framing the practice of cartography as a catalyst for the emergence of new spatial and compositional theories Beginning with an examination of the emblematic urban plan that Napol on III gave to the prefect of the Seine Georges Eug ne Haussmann in 1853 Lee explores the significance of the map itself the means of its production through surveying the methods of its use and reception by architects engineers and administrators and its place in the visual culture of Paris s modernization At the heart of this exploration is a focus on orthography in architecture and the new quality of exactitude in modern mapping practices The precise grid structure of orthographic maps and plans evinced a sense of objectivity yet it was not without political context and social consequences as Lee demonstrates throughout The Age of Projects William Andrews Clark Memorial Library, 2008-01-01 The Age of Projects uses the notion of a project as a key to understanding the massive social cultural political literary and scientific transitions that occurred in Europe during the late seventeenth century Signs of

Difference Susan Gal, Judith T. Irvine, 2019-06-27 An important study of how signs and sign relations create social and linguistic differences and unities
The Shadow of Enlightenment Theresa Levitt, 2009-01-08 This book is the first to place revolutionary advances in light and optics in the cultural context of France in the first half of the nineteenth century The narrative follows the work and careers of France s two chief rivals on the subject of light Arago and Biot Their disagreement began on the subject of technical optics but expanded to include politics religion agricultural policy education dinner companions housing arrangements photography railroads vital forces astrology the Egyptian calendar and colonial slavery At the heart of their disagreement was always a question of visibility and the extent of transparency or obscurity they assigned to the world Optical transparency formed a crucial condition for Arago s vision of a liberal republic governed by reason Biot s call for strong forms of authority rested on his claims that the world did not offer itself up for universal agreement so easily

The Global Transformation of Time Vanessa Ogle, 2015-10-12 As railways steamships and telegraph communications brought distant places into unprecedented proximity previously minor discrepancies in local time telling became a global problem Vanessa Ogle's chronicle of the struggle to standardize clock times and calendars from 1870 to 1950 highlights the many hurdles that proponents of uniformity faced Wrong for the Right Reasons Jed Z. Buchwald, A. Franklin, 2006-03-30 The rapidity with which knowledge changes makes much of past science obsolete and often just wrong from the present's point of view We no longer think for example that heat is a material substance transferred from hot to cold bodies But is wrong science always or even usually bad science. The essays in this volume argue by example that much of the past s rejected science wrong in retrospect though it may be and sometimes markedly so was nevertheless sound and exemplary of enduring standards that transcend the particularities of culture and locale Of Clocks and Time Lutz Hüwel, 2018-05-03 Of Clocks and Time takes readers on a five stop journey through the physics and technology and occasional bits of applications and history of timekeeping On the way conceptual vistas and gualitative images abound but since mathematics is spoken everywhere the book visits equations quantitative relations and rigorous definitions are offered as well The expedition begins with a discussion of the rhythms produced by the daily and annual motion of sun moon planets and stars Centuries worth of observation and thinking culminate in Newton's penetrating theoretical insights since his notion of space and time are still influential today During the following two legs of the trip tools are being examined that allow us to measure hours and minutes and then with ever growing precision the tiniest fractions of a second When the pace of travel approaches the ultimate speed limit the speed of light time and space exhibit strange and counter intuitive traits On this fourth stage of the journey Einstein is the local tour guide whose special and general theories of relativity explain the behavior of clocks under these circumstances Finally the last part of the voyage reverses direction moving ever deeper into the past to explore how we can tell the age of things including that of the universe itself Standardization in the Middle Ages Line Cecilie Engh, Kristin B. Aavitsland, 2024-11-18 We live in a world riven through with standards To understand more

of their deep rich past is to understand ourselves better The two volumes Standardization in the Middle Ages Volume 1 The North and Standardization in the Middle Ages Volume 2 Europe turn to the Middle Ages to give a deeper understanding of the medieval ideas and practices that produced and were produced by standards and standardization At first glance the Middle Ages might appear an unlikely place to look for standardization. The editors argue that on the contrary generating predictability is a precondition for meaningful cultural interaction in any historical period and that we may look to the Middle Ages to learn more about the historical social and cognitive processes of standardization This multidisciplinary venture which includes medievalists from the fields of history intellectual history art history philology numismatics and more as well as scholars of cognitive science informatics and anthropology interrogates how medieval people and groups envisioned and enforced predictability uniformity and order and how they attempted to obtain and maintain standards across vast distances and heterogeneous social and cultural structures In Pursuit of Land Tenure Security Henri Dekker, 2006-03 Annotation In Pursuit of Land Tenure Security is a unique book that takes the reader on an international tour of perceptions of land tenure security It contains an anthology of essays based on contacts with people during assignments in various parts of the world over a period of several years. The essays describe the human pursuit for a higher level of land tenure security Because land tenure security is a perception the use of stories of human experience introduces the reader to an array of issues associated with land tenure among them controversial approaches to providing land tenure security In this way the pursuit of land tenure security becomes a captivating story for anyone interested in land related policies land related studies and all those who have discovered the importance of protection of the rights to real property by people all over the world Dahler-Larsen, 2019-02-07 The notion of quality features prominently in contemporary discourse Numerous ratings rankings metrics auditing accreditation benchmarking smileys reviews and international comparisons are all used regularly to capture quality This book paves the way in exploring the socio political implications of evaluative statements with a specific focus on the contribution of the concept of quality to these processes Drawing on perspectives from the history of ideas sociology political science and public management Dahler Larsen asks what is the role of quality and more specifically quality inscriptions such as measurement What do they accomplish And finally as a consequence of all this does the term quality make it possible to deal with public issues in a way that lives up to democratic standards This cross disciplinary book will be of interest to scholars and students across various fields including sociology social epistemology political science public policy and evaluation Water, Civilisation and Power in Sudan Harry Verhoeven, 2015-03-05 In 1989 a secretive movement of Islamists allied itself to a military cabal to violently take power in Africa's biggest country Sudan's revolutionary regime was built on four pillars a new politics economic liberalisation an Islamic revival and a U turn in foreign relations and mixed militant conservatism with social engineering a vision of authoritarian modernisation Water and agricultural policy have been central to this state building project Going beyond the conventional lenses of famine water wars or the oil resource curse

Harry Verhoeven links environmental factors development and political power Based on years of unique access to the Islamists generals and business elites at the core of the Al Ingaz Revolution Verhoeven tells the story of one of Africa's most ambitious state building projects in the modern era and how its gamble to instrumentalise water and agriculture to consolidate power is linked to twenty first century globalisation Islamist ideology and intensifying geopolitics of the Nile
