Measure Of Reality Quantification In Western Europe 1250 16:

The Measure of Reality Alfred W. Crosby, 1997-12-13 This 1997 book discusses the shift to quantitative perception which made modern science technology business practice and bureaucracy possible

The Oxford Handbook of the Baroque John D. Lyons, 2019 Baroque the cultural period extending from the mid sixteenth to the mid eighteenth century created some of the world's most striking monuments music artworks and literature This Handbook goes beyond all existing studies by presenting Baroque not only as a style but also as a global cultural phenomenon arising in response to enormous religious political and technological changes

The Origins of the Modern World Robert B. Marks, 2019-07-05 Now in a new edition this clearly written and engrossing book presents a global and environmental narrative of the origins of the modern world since 1400 Robert Marks constructs a story in which Asia Africa and the New World play major roles and points to the resurgence of Asia and the vastly changed relationship of humans to the environment

Energy Frank Niele, 2011-08-30 *Energy Engine of Evolution* is a compelling book that provides a compact history of energy over the last four billion years with the aim of creating a sound basis to understanding the possible futures of the energy industry It describes the role that energy has played in the evolution of nature and culture the impact it has had on the world over time and the implications that we are faced with concerning the role of energy in the future This book describes the relationship between life and energy through time outlining how the major revolutions in the evolution of life on earth were driven by developments at the energy frontiers *Energy Engine of Evolution* states that we are on the verge of the next energy revolution where we will learn how to master new energy forms in a new way As a result of years of research and discussions by leading experts in the oil and gas industry this publication offers inspiring insights and examples of new approaches to technological and evolutionary developments paving the way towards a more sustainable future Provides evolutionary insight Introduces an Energy Time Scale that shows key relationships between energy and the history of planet Earth Contains exciting examples of new approaches to sustainable development

A Forest on the Sea Karl Appuhn, 2009 The idea of a Venetian forestry service might strike one as the beginning of a joke The statement that it began in the fourteenth century would surprise most people Venice is built on a lagoon with no timber resources This book reveals the story of Venice's attempt to establish protected forests in order to have a constant supply of wood Beyond the need for wood for heating and cooking tall beams of oak and beech were needed for ship building and the shoring up of breakwaters that kept the sea from flooding the city The author follows the practice of forest conservation and management from its inception in the 1300s to the end of the eighteenth century He details the administrative and legal debates as well as problems with the implementation of policies This study is a corrective to histories that assume a lack of interest in forest conservation in Europe at this time The experience of the Venetians also serves as an example for timber use and conservation today

Early Modern European Society Henry Kamen, 2000 This book surveys the sweeping changes effecting Europe from the end of the fifteenth century to the early

decades of the eighteenth century It examines the significance of broad community based norms and the development of social disciplines

Historians Debate the Rise of the West Jonathan Daly,2014-07-11 How and why did Europe rise to world pre eminence Providing an overview of this central historical conundrum of modern times Historians Debate the Rise of the West enables students to grasp major scholars evaluations of the biggest picture of all how Western civilization fits into modern world history Most historians who write in this area subscribe to a combination of interpretations set forward by scholars of the field like David Landes Jared Diamond or Kenneth Pomeranz But it is often difficult to understand the position they are coming from and for readers to understand clearly how Europe made the transition from merely one of many developing civilizations to the world s first industrial power In this volume Jonathan Daly introduces us to the main interpretations of Europe s rise that have been proposed over the past half century and presents the views of these historians and schools of scholarship advocating for each point of view and letting each author speak for him or herself through the inclusion of brief textual selections Also included are interesting biographical details for each scholar as well as a list of further reading for each chapter and a collection of maps An ideal introduction for students of world history

Forging America John Bezis-Selfa,2018-10-18 Stacks of stone preside over many bucolic and wooded landscapes in the mid Atlantic states Initially constructed more than two hundred years ago they housed blast furnaces that converted rock and wood into the iron that enabled the United States to secure its national independence By the eve of the Revolutionary War furnaces and forges in the American colonies turned out one seventh of the world s iron Forging America illuminates the fate of labor in an era when industry manhood and independence began to take on new and highly charged meanings John Bez s Selfa argues that the iron industry with its early concentrations of capital and labor reveals the close links between industrial and political revolution Through means ranging from religious exhortation to force ironmasters encouraged or compelled workers free indentured and enslaved to adopt new work styles and standards of personal industry Eighteenth century revolutionary rhetoric hastened the demise of indentured servitude however and national independence reinforced the legal status of slavery and increasingly defined manual labor as dependent and racially coded Bez s Selfa highlights the importance of slave labor to early American industrial development Research in documents from the seventeenth eighteenth and early nineteenth centuries led Bez s Selfa to accounts of the labor of African Americans indentured servants new immigrants and others Their stories inform his highly readable narrative of more than two hundred years of American history

The Routledge Research Companion to the Medieval Icelandic Sagas Ármann Jakobsson,Sverrir Jakobsson,2017-02-17 The last fifty years have seen a significant change in the focus of saga studies from a preoccupation with origins and development to a renewed interest in other topics such as the nature of the sagas and their value as sources to medieval ideologies and mentalities The Routledge Research Companion to the Medieval Icelandic Sagas presents a detailed interdisciplinary examination of saga scholarship over the last fifty years sometimes juxtaposing it with earlier views and examining the sagas

both as works of art and as source materials This volume will be of interest to Old Norse and medieval Scandinavian scholars and accessible to medievalists in general **An Historical Geography of Europe** Robin Alan Butlin, Robert A.

Dodgshon, 1998 An Historical Geography of Europe represents the first multi authored comprehensive study on the subject It provides the reader with an analytical and explanatory account of European historical geography from classical times to the modern period including the vast changes to landscape settlements population and in political and cultural structures and character that have taken place since 1500 The book takes account of the vast volume of relevant research and literature that has been published over the past two or three decades in order to achieve a unique coverage and synthesis of this very broad range of evidence and opinion and has tried to engage with many of the main themes and debates to give a clear indication of changing ideas and interpretations of the subject This book brings together British and European authors from a number of disciplines who have considerable distinction in the various fields of historical geography and related fields

including a significant number who have already written on the wider problem of European historical geography It is amply illustrated with maps and diagrams to present many of the issues in a visual form Realism and Moralism in International Relations Eric J. Janse de Jonge, Ernst M.H. Hirsch Ballin, Willem J.M. van Genugten, Pieter H. Kooijmans, 2023-09-29

Professor Frans Alting von Geusau held the chair of Professor of International Organizations at Tilburg University His life long academic and distinguished career is reflected in this book He has long inspired others with his insistence that political realism can only be matched with a sense of ethical purpose This moral dimension of international relations is one of the main themes of the 23 contributions Academics from the United States the UK Israel The Netherlands and other European countries give their view of a world which faces the challenges of the next millennium Those who share von Geusau s deep interest in the cultural and moral dimensions of international relations will find excellent essays on this issue in this book Those who want to enlarge their views on the uncertain future of a united Europe will find inspiring ideas and visions in this book This book demonstrates that what really matters is righteousness and justice for all European Warfare, 1494-1660

Jeremy Black, 2005-07-05 The onset of the Italian Wars in 1494 subsequently seen as the onset of modern warfare provides the starting point for this impressive survey of European Warfare in early modern Europe Huge developments in the logistics of war combined with exploration and expansion meant interaction with extra European forms of military might Jeremy Black looks at technological aspects of war as well social and political developments and effects during this key period of military history This sharp and compact analysis contextualises European developments and as establishes the global significance of events in Europe **Prometheus Tamed** Cornel Zwierlein, 2021-01-11 Over 8 200 large city fires broke out between 1000 and 1939 CE in Central Europe Prometheus Tamed inquires into the long term history of that fire ecology its local and regional frequencies its relationship to climate history It asks for the visual and narrative representation of that threat in every day life Institutional forms of fire insurance emerged in the form of private joint stock companies the British model

starting in 1681 or in the form of cameralist fire insurances the German model starting in 1676 They contributed to shape and change society transforming old communities of charitable solidarity into risk communities finally supplemented by networks of cosmopolite aid After 1830 insurance agencies expanded tremendously quickly all over the globe Cultural clashes of Western and native perceptions of fire risk and of what is insurance can be studied as part of a critical archaeology of world risk society and the plurality of modernities *Europe's Welfare Traditions Since 1500, Volume 2* Thomas McStay Adams, 2023-01-26 Tracing the interwoven traditions of modern welfare states in Europe over five centuries Thomas McStay Adams explores social welfare from Portugal France and Italy to Britain Belgium and Germany He shows that the provision of assistance to those in need has faced recognizably similar challenges from the 16th century through to the present how to allocate aid equitably and with dignity how to give support without undermining autonomy and motivation and how to balance private and public spheres of action and responsibility Across two authoritative volumes Adams reveals how social welfare administrators critics and improvers have engaged in a constant exchange of models and experience locally and across Europe The narrative begins with the founding of the Casa da Misericordia of Lisbon in 1498 a model replicated throughout Portugal and its empire and ends with the relaunch of a social agenda for the European Union at the meeting of the Council of Europe in Lisbon in 2000 Volume 1 which focuses on the period from 1500 to 1700 discusses the concepts of welfare and tradition It looks at how 16th century humanists joined with merchants and lawyers to renew traditional charity in distinctly modern forms and how the discipline of religious reform affected the exercise of political authority and the promotion of economic productivity Volume 2 examines 18th century bienfaisance which secularized a Christian humanist notion of beneficence producing new and sharply contested assertions of social citizenship It goes on to consider how national struggles to establish comprehensive welfare states since the second half of the 19th century built on the power of the vote as politicians pushed by activists and advised by experts appealed to a growing class of industrial workers Lastly it looks at how 20th century welfare states addressed aspirations for social citizenship while the institutional framework for European economic cooperation came to fruition *Commerce Before Capitalism in Europe, 1300-1600* Martha C. Howell, 2010-04-12 Later generations have sometimes found such actions perplexing often dismissing them as evidence that business people of the late medieval and early modern worlds did not fully understand market rules *American Encounters* Peter C. Mancall, James Hart Merrell, 2000 A collection of articles that describe the relationships and encounters between Native Americans and Europeans throughout American history *Neoliberalism, the Security State, and the Quantification of Reality* David R. Lea, 2016-12-14 As the security state grows in power and dominance commercial and financial interests increasingly penetrate our social existence *Neoliberalism the Security State and the Quantification of Reality* addresses the relationship between these two trends in its discussion of neoliberalism financialization and managerialism with a particular focus on the decline of professionalism the restructuring of tertiary education and the university's abandonment of the

humanities Additionally David Lea links these developments with the failings of democratic institutions the growth of the disciplinary society and the emergence of the security state which relentlessly governs by extraordinary fiat dividing disempowering and excluding Lea identifies one such linkage in the common form of rationality which underlies contemporary approaches to reality Others have noted that one of the most notable political developments of the last thirty years or so has been increasing public and governmental demand for the quantification of social phenomena Moreover A W Crosby has attributed Europe's unprecedented imperial success which began in early European Modernity to a paradigmatic shift from a qualitative world view grounded in Platonic and Neo Platonic idealism to a more quantitative world view Nevertheless this quantitative approach towards the natural and social worlds alienates humans from other species and even from ourselves and fails to represent life as we actually experience it While a quantitative world view may have facilitated imperial success and the interlocking exercise of power and authority by the state and the economically empowered this instrumental form of thinking rationales strategies and facilitates policies that restrict and vitiate individual autonomy to create a seamless controlled conformity This form of thinking that relies on the quantification of natural and social phenomena creates a value free equivalency which at the same time invidiously divides society into the wealthy and the impoverished the advantaged and the exploited the politically included and the excluded

Time and the French Revolution Matthew Shaw, 2011 A history of the innovation and effects of the French Republican Calendar The French Republican Calendar was perhaps the boldest of all the reforms undertaken in Revolutionary France Introduced in 1793 and used until 1806 the Calendar not only reformed the weeks and months of the year but decimalised the hours of the day and dated the year from the beginning of the French Republic This book not only provides a history of the calendar but places it in the context of eighteenth century time consciousness arguing that the French were adept at working within several systems of time keeping whether that of the Church civil society or the rhythms of the seasons Developments in time keeping technology and changes in working patterns challenged early modern temporalities and the new calendar can also be viewed as a step on the path toward a more modern conception of time In this context the creation of the calendar is viewed not just as an aspect of the broader republican programme of social political and cultural reform but as a reflection of a broader interest in time and the culmination of several generations concern with how society should be policed Matthew Shaw is a curator at the British Library London

The Great Rift Michael E. Hobart, 2018-04-16 Michael Hobart locates the great rift between science and religion not in ideological disagreement but in advances in mathematics and symbolic representation that moved past language to open new windows onto the natural world His work connects the cognitive breakthroughs of the past with intellectual debates ongoing in the twenty first century

Money and Thoughtlessness Justin Pack, 2023-01-01 In this book Justin Pack proposes a genealogy of the traditional suspicion of money and merchants This genealogy is framed both by how money itself has changed and how different traditions responded to money Money and merchants became

heavily debated concerns in the Axial Age which coincided with the spread of coinage A deep suspicion of money and merchants was particularly notable in the Greek Confucian and Christian traditions and continued into the Middle Ages These traditions wrestled with a new dialectic of purity that also appears with the widespread use of money How were these concerns dealt with politically socially and philosophically How did they change over time How did medieval Europe deal with money and how did this inform modern governmentality To answer these questions Pack turns to Hanna Arendt's work Arendt argues that one of the outstanding characteristics of our time is thoughtlessness This thoughtlessness is related to how modern life especially under neoliberalism is increasingly structured by abstract systems abstract calculative rationality abstract relations and the profit motive Money both drives and embodies this machinery The hyper complex abstract systems of modernity discourage to use Arendtian terms thinking wonder questioning everything in favor of cognition problem solving Too often the result is thoughtless cognition the ability to make things more productive and efficient paired with the incapacity to question and challenge the implications and morality of these systems
