*Operators in Non-Standard Function Spaces* Vakhtang Kokilashvili,Alexander Meskhi,Humberto Rafeiro,Stefan Samko,2024-10-18 The present monograph serves as a natural extension of the prior 2 volume monograph with the same title and by the same authors which encompassed findings up until 2014 This four volume project encapsulates the authors decade long research in the trending topic of nonstandard function spaces and operator theory One of the main novelties of the present book is to develop the extrapolation theory generally speaking in grand Banach function spaces and to apply it for obtaining the boundedness of fundamental operators of harmonic analysis in particular function spaces such as grand weighted Lebesgue and Lorentz spaces grand variable exponent Lebesgue Morrey spaces mixed normed function spaces etc Embeddings in grand variable exponent Haj asz Sobolev spaces are also studied Some applications to the approximation

theory and boundary value problems of analytic functions are presented as well. The book is aimed at an audience ranging from researchers in operator theory and harmonic analysis to experts in applied mathematics and post graduate students. In particular, we hope that this book will serve as a source of inspiration for researchers in abstract harmonic analysis, function spaces, PDEs and boundary value problems.

*Oseledec Multiplicative Ergodic Theorem for Laminations*, Việt-Anh Nguyễn, 2017-02-20

Given a dimensional lamination endowed with a Riemannian metric, the author introduces the notion of a multiplicative cocycle of rank  $n$ , where  $n$  and  $k$  are arbitrary positive integers. The holonomy cocycle of a foliation and its exterior powers, as well as its tensor powers, provide examples of multiplicative cocycles. Next, the author defines the Lyapunov exponents of such a cocycle with respect to a harmonic probability measure directed by the lamination. He also proves an Oseledec multiplicative ergodic theorem in this context. This theorem implies the existence of an Oseledec decomposition almost everywhere, which is holonomy invariant. Moreover, in the case of differentiable cocycles, the author establishes effective integral estimates for the Lyapunov exponents. These results find applications in the geometric and dynamical theory of laminations. They are also applicable to not necessarily closed laminations with singularities. Interesting holonomy properties of a generic leaf of a foliation are obtained. The main ingredients of the author's method are the theory of Brownian motion, the analysis of the heat diffusions on Riemannian manifolds, the ergodic theory in discrete dynamics, and a geometric study of laminations.

*Analysis and Partial Differential Equations*, Thomas Alazard, 2024-09-25

This textbook provides a modern introduction to advanced concepts and methods of mathematical analysis. The first three parts of the book cover functional analysis, harmonic analysis, and microlocal analysis. Each chapter is designed to provide readers with a solid understanding of fundamental concepts while guiding them through detailed proofs of significant theorems. These include the universal approximation property for artificial neural networks, Brouwer's domain invariance theorem, Nash's implicit function theorem, Calderón's reconstruction formula and wavelets, Wiener's Tauberian theorem, Hörmander's theorem of propagation of singularities, and proofs of many inequalities centered around the works of Hardy, Littlewood, and Sobolev. The final part of the book offers an overview of the analysis of partial differential equations. This vast subject is approached through a selection of major theorems, such as the solution to Calderón's problem, De Giorgi's regularity theorem for elliptic equations, and the proof of a Strichartz-Bourgain estimate. Several renowned results are included in the numerous examples. Based on courses given successively at the École Normale Supérieure in France, ENS Paris, and ENS Paris-Saclay, and at Tsinghua University, the book is ideally suited for graduate courses in analysis and PDE. The prerequisites in topology and real analysis are conveniently recalled in the appendix.

**Real Analysis Methods for Markov Processes**, Kazuaki Taira, 2024

*Zusammenfassung*: This book is devoted to real analysis methods for the problem of constructing Markov processes with boundary conditions in

probability theory Analytically a Markovian particle in a domain of Euclidean space is governed by an integro differential operator called the Waldenfels operator in the interior of the domain and it obeys a boundary condition called the Ventcel Wentzell boundary condition on the boundary of the domain Most likely a Markovian particle moves both by continuous paths and by jumps in the state space and obeys the Ventcel boundary condition which consists of six terms corresponding to diffusion along the boundary an absorption phenomenon a reflection phenomenon a sticking or viscosity phenomenon and a jump phenomenon on the boundary and an inward jump phenomenon from the boundary More precisely we study a class of first order Ventcel boundary value problems for second order elliptic Waldenfels integro differential operators By using the Calder n Zygmund theory of singular integrals we prove the existence and uniqueness of theorems in the framework of the Sobolev and Besov spaces which extend earlier theorems due to Bony Courr ge Priouret to the vanishing mean oscillation VMO case Our proof is based on various maximum principles for second order elliptic differential operators with discontinuous coefficients in the framework of Sobolev spaces My approach is distinguished by the extensive use of the ideas and techniques characteristic of recent developments in the theory of singular integral operators due to Calder n and Zygmund Moreover we make use of an  $L_p$  variant of an estimate for the Green operator of the Neumann problem introduced in the study of Feller semigroups by me The present book is amply illustrated 119 figures and 12 tables are provided in such a fashion that a broad spectrum of readers understand our problem and main results
