Mechanics of Sheet Metal Forming D. Koistinen,2012-12-06 This volume records the proceedings of an international symposium on MECHANICS OF SHEET METAL FORMING Material Behavior and Deformation Analysis It was sponsored and held at the General Motors Research Labora tories on October 17 18 1977 This symposium was the twenty first in an annual series The objective of this symposium was to discuss the research frontiers in experimental and theoretical methods of sheet metal forming analysis and also to determine directions of future research to advance technology that would be useful in metal stamping plants Metal

deformation analyses which provide guide lines for metal flanging are already in use Moreover recent advances in computer techniques for solving plastic flow equations and in measurements of material parameters are leading to dynamic models of many stamping operations These models would accurately predict the stresses and strains in the sheet as a function of punch travel They would provide the engineer with the knowledge he needs to improve die designs The symposium papers were organized into five sessions the state of the art constitutive relations of sheet metal role of friction sheet metal formability and deformation analysis of stamping operations We believe this volume not only summarizes the various viewpoints at the time of the symposium but also provides an outlook for materials and mechanics research in the future Practical
