Measurement In Social Science:

Conceptualization and Measurement in the Social Sciences Hubert M. Blalock, 1982 This is the paperback edition of the classic *Conceptualization and Measurement in the Social Sciences* first published in hardback in 1982 Blalock challenges social scientists to move beyond simple manipulation of numbers for he believes that significant advances in methods are impossible without conceptual developments to give them meaning He carefully describes the relationship between theory and method examining central issues such as the generalizability and comparability of measurements and the omission of important variables when analyzing data

Measurement in the Social Sciences Blalock, *Measurement in the Social Sciences* Richard A. Zeller, Edward G. Carmines, 1980-04-30 This textbook is designed to bridge the gap between the theorist and the methodologist by presenting an integrated approach to measurement By differentiating between random and systematic error it conveys both statistical techniques and their theoretical underpinnings essential to students of sociology and political science Rather than developing new technical methods of new theoretical structures Professors Zeller and Carmines provide thorough explanations of the assumptions limitations and interpretations of previously established techniques and theories Written at a level accessible to students of social science with some statistical training the book does not presume a sophisticated mathematical background By concentrating on synthesizing the methodological and theoretical realms Zeller and Carmines demonstrate why measurement considerations are important to research and how measurement principles can be most effectively applied

Scale Development Robert F. DeVellis, 2003 Scale Development guides the reader toward the identification of the latent variable the generation of an item pool the format for measurement the optimization of the scale length Using exercises to illustrate the concepts the text also includes advice about factor analytic strategies
