

Measuring Development

It is very difficult to work out one person's standard of living

To try to measure precisely the standard of living of all the people in a country is impossible

The best that can be done is to select a few indicators of development and measure these indicators

Some examples would be:

- Average income
- Life expectancy
- Education
- Food intake etc.

Can you think of any more?

Measuring Development Asis Kumar Banerjee, 2020-06-24 This book discusses how to measure the level of development of an economy particularly the task of ranking economies in terms of their development In this context development is defined as an increase in people's level of wellbeing The book emphasises that wellbeing is a multidimensional concept and that it is important to ask how equitably the fruits of development are distributed and as such it focuses on multidimensional inequality sensitive development ranking Rather than using various specific development indices which would lead to different development rankings for a country the book proposes a dominance approach which formulates conditions under which two economies can be ranked unambiguously making it valid for all reasonable development indices With the help of illustrative examples using real world data it demonstrates that such unambiguous rankings are possible and that the proposed approach can be used to complement traditional approaches An invaluable resource for researchers working in the field of development the book will also appeal to practitioners engaged in measuring development An excerpt from the book's Foreword This book is a comprehensive and valuable contribution to the literature on the measurement of inequality and the use of such measurement in the assessment of social welfare I believe that it will be of much interest to researchers working on measures of inequality and social welfare as well as advanced graduate students who are looking for a solid introduction to this important area of normative economics Prof Prasanta K Pattanaik University of California Riverside California U S A

A Measured Approach to Ending Poverty and Boosting Shared Prosperity World Bank,2014-10-07 In 2013 the World Bank Group adopted two new goals to guide its work ending extreme poverty and boosting shared prosperity More specifically the goals are to reduce extreme poverty in the world to less than 3 percent by 2030 and to foster income growth of the bottom 40 percent of the population in each country While poverty reduction has been a mainstay of the World Bank s mission for decades the Bank has now set a specific goal and timetable and for the first time the Bank has explicitly included a goal linked to ensuring that growth is shared by all The discussion until now has centered primarily on articulating the new goals This report the latest in World Bank s Policy Research Report series goes beyond that and lays out their conceptual underpinnings discusses their relative strengths and weaknesses by contrasting them with alternative indicators and proposes empirical approaches and requirements to track progress towards the goals The report makes clear that the challenges posed by the World Bank Group s new stance extend not just to the pursuit of these goals but indeed to their very definition and empirical content The report also argues that an improved data infrastructure consisting of many elements including the collection of more and better survey data is critical to ensure that progress towards these goals can be measured and policies to help achieve them can be identified and prioritized

Economics An Introduction for South African Learners aims to provide students with a basic understanding of the subject and to provide a foundation to help them to further their study in the field It presents economics in an interesting and accessible way by focusing on the current debates This practical book has sections designed to build the learners academic skills and it includes topics such as essay writing the use of graphs and critical reading Based on the author s extensive teaching experience it has been written specifically for entry level economics students and those wishing to gain a rudimentary understanding of the subject Tourism and the Millennium Development Goals Jarkko Saarinen,Christian M. Rogerson,Haretsebe Manwa,2013-10-31 In 2000 United Nations adopted the Millennium Development Goals UN MDGs committing the member nations to a new global partnership to reduce extreme poverty and setting out a series of specific targets with a deadline of 2015 Related to the UN MDGs tourism is increasingly seen as a promising tool for poverty reduction ensuring environmental sustainability and developing a global partnership for development for example Thus the industry has become an important policy tool for community and regional development in many developing countries and the expectations for tourism and its social and economic outcomes have evolved to a high level However there are still many challenges to overcome in the relationship between tourism industry development and poverty reduction This book aims to discuss the promises challenges and outcomes of tourism in development with a specific aim of drawing together research related to tourism and UN MDGs The papers discuss what lessons can be learnt and conclusions drawn from the utilisation of tourism for development and poverty reduction What emerges from this collection is a set of interesting results and notions which both support and challenge the connections between tourism and development and the new role of tourism in global development This book is an extended version of a special issue published in Current Issues in Tourism Trying to Measure Globalization Marco Caselli,2012-01-05 The aim of this book is to conduct a critical survey of the main tools devised for the synthetic measurement of globalization processes To this end the first part of the book discusses the meaning of the concept considered highlighting the different and often contradictory interpretations put forward in its regard in the literature Subsequently analysed are the passages and issues that must be addressed when constructing an instrument intended to measure a social phenomenon of such complexity as globalization Stressed in particular is that the researcher s subjectivity is repeatedly involved in these passages so that no instrument can have objective validity Given these premises the book presents the principal tools employed in attempts to measure globalization starting with those whose unit of analysis is the state In this regard particular space is devoted to indexes which take a multidimensional approach to the concept of globalization There follows a comparison among the results obtained using these indexes and criticisms are made of the ways in which the latter have been constructed A limitation or if one wishes a paradox concerning such tools is that

they measure in relation to states a process which has as one of its principal features the fact that it extends beyond the confines of states For this reason the final chapter considers whether globalization can be measured with different units of analysis in particular people and cities The books concludes with discussion of the general limitations of globalization indexes
