Dixon, Meredith Reid Sarkees, 2015-10-22 This title describes how civil war is defined and categorized and presents data and descriptions for nearly 300 civil wars waged from 1816 to the present Analyzing trends over time and regions this work is the definitive source for understanding the phenomenon of civil war *Advancing Peace Research* J. David Singer, 2012-04-27 Professor J David Singer has been arguably the most important influence on quantitative research into the causes and attributes of war His pioneering work on the Correlates of War project at the University of Michigan and his numerous books and articles have inspired generations of researchers in the fields of international relations conflict analysis security studies and peace science This collection is a carefully selected overview of his work which provides not only an excellent introduction to his considerable methodological theoretical and empirical contributions but also an intellectual history of developments in the field of international relations which are reflected in Professor Singer s work This is essential reading for all those with an interest in the use of quantitative methods in social science the changing nature of the study of international relations and the analysis of war and peace **Measuring the Health of the Liberal International Order**

Michael J. Mazarr, Astrid Stuth Cevallos, Miranda Priebe, Andrew Radin, Kathleen Reedy, Alexander D. Rothenberg, Julia A. Thompson, Jordan Willcox, 2017-09-05 As part of a larger study on the future of the post World War II liberal international order RAND researchers analyze the health of the existing order and offer implications for future U S policy The study s overall conclusion is that the postwar order continues to enjoy many elements of stability but is increasingly threatened by major geopolitical and domestic socioeconomic trends that call into question the order s fundamental assumptions

Weapons for Peace, Weapons for War Cassady B. Craft, 1999-08-04 First published in 1999 Routledge is an imprint of

Taylor Francis an informa company **Only the Dead** Bear F. Braumoeller, 2019-07-25 The idea that war is going out of style has become the conventional wisdom in recent years But in *Only the Dead* award winning author Bear Braumoeller demonstrates that it shouldn't have With a rare combination of historical expertise statistical acumen and accessible prose Braumoeller shows that the evidence simply doesn't support the decline of war thesis propounded by scholars like Steven Pinker He argues that the key to understanding trends in warfare lies not in the spread of humanitarian values but rather in the formation of international orders sets of expectations about behavior that allow countries to work in concert as they did in the Concert of Europe and have done in the postwar Western liberal order With a nod toward the American sociologist Charles Tilly who argued that war made the state and the state made war Braumoeller shows argues that the same is true of international orders while they reduce conflict within their borders they can also clash violently with one another as the Western and communist orders did throughout the Cold War Both highly readable and rigorous *Only the Dead* offers a realistic assessment of humanity's quest to abolish warfare While pessimists have been too quick to discount the successes of our attempts to reduce international conflict optimists are prone to put too much faith in human nature Reality lies somewhere in between While the aspirations of humankind to govern its behavior with reason and justice have had shocking success in moderating the harsh dictates of realpolitik the institutions that we have created to prevent war are unlikely to achieve anything like total success as evidenced by the multitude of conflicts in recent decades As the old adage advises us only the dead have seen the end of war Peacebuilding Paradigms Henry F. Carey, 2020-12-17 Peacebuilding is explained by combining interpretive frameworks paradigms that have evolved from the subfields of international relations and comparative politics **Fighting Words** Hector Avalos, Is religion inherently violent If not what provokes violence in the name of religion Do we mischaracterize religion by focusing too much on its violent side In this intriguing original study of religious violence Prof Hector Avalos offers a new theory for the role of religion in violent conflicts Starting with the premise that most violence is the result of real or perceived scarce resources Avalos persuasively argues that religion creates new scarcities on the basis of unverifiable or illusory criteria Through a careful analysis of the fundamental texts of Judaism Christianity Islam and Hinduism Dr Avalos explains how four scarce resources have figured repeatedly in creating religious violence sacred space e.g. the perception by three world religions that Jerusalem is sacred the creation of holy scriptures believed to be privileged revelations of God's will group privilege stemming from such beliefs as a chosen people or predestination which also creates a group of outsiders and salvation by which concept some are accepted and others rejected Thus Avalos shows religious violence is often the most unnecessary violence of all since the scarce resources over which religious conflicts ensue are not actually scarce or need not be scarce Comparing violence in religious and nonreligious contexts Avalos makes the compelling argument that if we condemn violence caused by scarce resources as morally objectionable then we must consider even more objectionable violence provoked by alleged scarcities that cannot be proven

to exist He also examines the Nazi Holocaust and the Stalinist Terror which have been attributed to the pernicious effects of atheism or secular humanism By contrast Avalos pinpoints underlying religious factors as the cause of these horrific instances of genocidal violence This serious philosophical examination of the roots of religious violence adds much to our understanding of a perennial source of widespread human suffering Hector Avalos Ames IA is associate professor of Religious Studies at Iowa State University the author of five books on biblical studies and religion the former editor of the Journal for the Critical Study of Religion and executive director of the Committee for the Scientific Examination of Religion

Popular Dictatorships Aleksandar Matovski, 2021-11-25 Shows that the most widespread and malignant dictatorships today emerge by attracting genuine popular support in societies plagued by crises *Constructing Allied Cooperation* Marina E. Henke, 2019-10-15 How do states overcome problems of collective action in the face of human atrocities terrorism and the threat of weapons of mass destruction How does international burden sharing in this context look like between the rich and the poor the big and the small These are the questions Marina E Henke addresses in her new book *Constructing Allied Cooperation* Through qualitative and quantitative analysis of 80 multilateral military coalitions Henke demonstrates that coalitions do not emerge naturally Rather pivotal states deliberately build them They develop operational plans and bargain suitable third parties into the coalition purposefully using their bilateral and multilateral diplomatic connections what Henke terms diplomatic embeddedness as a resource As *Constructing Allied Cooperation* shows these ties constitute an invaluable state capability to engage others in collective action they are tools to construct cooperation Pulling apart the strategy behind multilateral military coalition building Henke looks at the ramifications and side effects as well As she notes via these ties pivotal states have access to private information on the deployment preferences of potential coalition participants Moreover they facilitate issue linkages and side payments and allow states to overcome problems of credible commitments Finally pivotal states can use common institutional contacts IO officials as cooperation brokers and they can convert common institutional venues into fora for negotiating coalitions The theory and evidence presented by Henke force us to revisit the conventional wisdom on how cooperation in multilateral military operations comes about The author generates new insights with respect to who is most likely to join a given multilateral intervention what factors influence the strength and capacity of individual coalitions and what diplomacy and diplomatic ties are good for Moreover as the Trump administration promotes an America First policy and withdraws from international agreements and the United Kingdom completes Brexit *Constructing Allied Cooperation* is an important reminder that international security cannot be delinked from more mundane forms of cooperation multilateral military coalitions thrive or fail depending on the breadth and depth of existing social and diplomatic networks *Piecing Together the Peaces* Alexander K. Antony, Director of Data Science and Analytics Alexander K Antony, William R. Thompson, Distinguished Professor and Donald A. Rogers Professor of Political Science Emeritus William R Thompson, 2024 In *Piecing Together the Peaces* Alexander K Antony and William R Thompson

provide a novel explanation for how peace took hold in the international system and why state behavior drastically changed According to the standard line of reasoning states need only democratize liberalize their trade modernize their economic culture or choose to forego territorial pursuits to reach peace with another state A bold challenge to the conventional wisdom that dominates interstate peace research Antony and Thompson make the case that industrialization provides the starting point from which we can begin to unpack the transformation in conflict propensities among certain states *Conflict, War, and Peace* Sara McLaughlin Mitchell, John A. Vasquez, 2013-08-13 Introducing students to the scientific study of peace and war *Conflict War and Peace An Introduction to Scientific Research* edited by Sara McLaughlin Mitchell and John A Vasquez provides an overview of current scholarship in this dynamic area of study Focusing on the factors that shape relationships between countries and that make war or peace more likely this collection of articles by top scholars explores such key topics as dangerous dyads alliances territorial disputes rivalry arms races democracy peace trade international organizations territorial peace and nuclear weapons Each article is followed by the editors commentary a Major Contributions section highlights the article s theoretical advances and relates each study to the broader literature while a Methodological Notes section carefully walks students through the techniques used in the analysis Methodological topics include research design percentages probabilities odds ratios statistical significance levels of analysis selection bias logic duration models and game theory models *Committing to Peace* Barbara F. Walter, 2021-04-13 Why do some civil wars end in successfully implemented peace settlements while others are fought to the finish Numerous competing theories address this question Yet not until now has a study combined the historical sweep empirical richness and conceptual rigor necessary to put them thoroughly to the test and draw lessons invaluable to students scholars and policymakers Using data on every civil war fought between 1940 and 1992 Barbara Walter details the conditions that lead combatants to partake in what she defines as a three step process the decision on whether to initiate negotiations to compromise and finally to implement any resulting terms Her key finding rarely are such conflicts resolved without active third party intervention Walter argues that for negotiations to succeed it is not enough for the opposing sides to resolve the underlying issues behind a civil war Instead the combatants must clear the much higher hurdle of designing credible guarantees on the terms of agreement something that is difficult without outside assistance Examining conflicts from Greece to Laos China to Columbia Bosnia to Rwanda Walter confirms just how crucial the prospect of third party security guarantees and effective power sharing pacts can be and that adversaries do in fact consider such factors in deciding whether to negotiate or fight While taking many other variables into account and acknowledging that third parties must also weigh the costs and benefits of involvement in civil war resolution this study reveals not only how peace is possible but probable **The War Puzzle Revisited** John A. Vasquez, 2009-07-23 John A Vasquez s *The War Puzzle* provided one of the most important scientific analyses of the causes of war of the last two decades *The War Puzzle Revisited* updates and extends his groundbreaking work reviewing research on the onset and

expansion of war and the conditions of peace Vasquez describes systematically those factors associated with wars to see if there is a pattern that suggests why war occurs and how it might be avoided delineating the typical path by which relatively equal states have become embroiled in wars in the modern global system The book uses the large number of empirical findings generated as the basis of its theorizing and integrates these research findings so as to advance the scientific knowledge of war and peace

Aggression and War Jo Groebel, Robert A. Hinde, 1989-03-23 Derived from a meeting of natural and social scientists this interdisciplinary book aims to summarize the main issues regarding the problem of human aggression as well as human beliefs about the subject This study brings together internationally known authorities and presents their recent contributions which range in complexity from the physiological to individual aggression group conflict and international war The study concludes with a multi level approach to the problems of aggression and war In nontechnical language suitable for general science readers the book provides a valuable framework for the development of ideas and new attitudes in a field rife with misconceptions

Mapping the New World Order Thomas J. Volgy, Zlatko Šabič, Petra Roter, Andrea K. Gerlak, 2009-08-18 This groundbreaking study maps out and analyzes the development of a global intergovernmental IGO institutional architecture in the post World War II era Systematically traces similarities and differences between the institutional architecture of the Cold War and post Cold War eras Examines the range of reasons why states join IGOs identifies patterns of participation within these organizations and examines the effects of membership on states Considers the impact of the EU on other regional organizations and developments outside Europe Provides a strong contribution to the study of international organization and IGO development combining both quantitative and qualitative methodologies

The Scientific Study of Peace and War John A. Vasquez, 1999-01-01 The contributors of this book suggest methodologies for a systematic analysis of historical examples using controlled observation the collection of evidence and careful inferences
