Measuring The Universe:

Measuring the Universe Kitty Ferguson, 2013-01-31 Suppose you and I still wondered whether all of the pinpoints of light in the night sky are the same distance from us Suppose none of our contemporaries could tell us whether the Sun orbits the Earth or vice versa or even how large the Earth is Suppose no one had guessed there are mathematical laws underlying the motions of the heavens How would how did anyone begin to discover these numbers and these relationships without leaving the Earth What made anyone even think it was possible to find out how far without going there In *Measuring the Universe* we join our ancestors and contemporary scientists as they tease this information out of a sky full of stars Some of the questions have turned out to be loaded and a great deal besides mathematics and astronomy has gone into answering them Politics religion philosophy and personal ambition all have played roles in this drama There are poignant personal stories of people like Copernicus Kepler Newton Herschel and Hubble Today scientists are attempting to determine the distance to objects near the borders of the observable universe far beyond anything that can be seen with the naked eye in the night sky and to measure time back to its origin The numbers are too enormous to comprehend Nevertheless generations of curious people have figured them out one resourceful step at a time Progress has owed as much to raw ingenuity as to technology and frontier inventiveness is still not out of date

Measuring the Universe Stephen Webb, 1999-03-18 A unified treatment of the various techniques used for distance determination The text begins by describing methods to measure distances on Earth then gradually climbs the distance ladder to enable us to estimate the distance to the farthest objects ending with a discussion of particle horizons within an expanding and inflationary universe Aimed at first year astronomy and astrophysics undergraduates the book emphasises general physical principles rather than mathematical detail and is enhanced and complemented by many worked examples questions and problem solving exercises at the end of each chapter

Measuring the Universe Kitty Ferguson, 1999-07-01 More than 2 000 years ago Eratosthenes in Alexandria used a stick a hole in the ground sunlight at summer solstice and elementary geometry to measure the circumference of the Earth with surprising accuracy long before anyone was able to circumnavigate it Today scientists are attempting to measure the entire universe and to determine its origin Although the methods have changed the quest to chart the horizons of space and time continues to be one of the great adventures of science *Measuring the Universe* is an eloquent chronicle of the men and women from Aristarchus to Cassini Sir Isaac Newton to Henrietta Leavitt and Stephen Hawking who have gradually unlocked the mysteries of how far and in so doing have changed our ideas about the size and nature of the universe and our place in it Kitty Ferguson reveals their methods to have been as inventive as their results were and are eye opening Advances such as Copernicus's revolutionary insights about the arrangement of the solar system William Herschel's meticulous creation of the first three dimensional map of the universe and Edwin Hubble's astonishing discovery that the universe is expanding have by turns revolutionized our concept of the universe Connecting centuries of breakthroughs with the political and cultural events

surrounding them Ferguson makes astronomy part of the sweep of history To measure the seemingly immeasurable scientists have always pushed the boundaries of the imagination today for example facing the paradox of an ever expanding universe that doesn't appear to expand into anything In Kitty Fergeson's skillful hands the unimaginable becomes accessible and the splendid quest something we all can share

Roman Ondák Roman Ondák, Bernhart Schwenk, 2008 Roman Ondák represents the Slovak Republic at the 2009 Venice Biennale In this volume the Slovak artist Roman Ondák has brought together some of his works that deal with time measurement and surveying along with those that make visible what evades the visual namely boundaries and experience Alongside a complete documentation of the exhibition *Measuring the Universe* where the museum attendants checked the body size of the visitors throughout its duration one also finds *Failed Fall 2008* a greenhouse's floor filled with dried autumn leaves and *Across that Place 2008* the story of the no longer existing Canal Zone by the Panama Canal Whether working with installation photography drawing or performance Ondák underpins his work with processes embedding them into the course of an action The action extends over time transcribes a scenario rather than explaining it and can be attached to radically minimalist objects or as in this case to extremely narrative books Anything that plays a role in his work has its place in this book the displacement of people and places presence and absence the economy of time This publication is part of the series of artists' projects by Christoph Keller Editions in collaboration with BAWAG Foundation English text
