A Handbook for Sensory and Consumer-Driven New Product Development Maurice O'Sullivan, 2016-09-16 A Handbook for Sensory and Consumer-Driven New Product Development explores traditional and well-established sensory methods, difference, descriptive and affective, as well as taking a novel approach to product development and the use of new methods and recent innovations. This book investigates the use of these established and new sensory methods, particularly hedonic methods coupled with descriptive methods, traditional and rapid through multivariate data analytical interfaces in the process of optimizing food and beverage products effectively in a strategically defined manner. The first part of the book covers the sensory methods which are used by sensory scientists and product developers, including established and new and innovative methods. The second section investigates the product development process and how the application of sensory analysis, instrumental methods and multivariate data analysis can improve new product development, including packaging.

optimization and shelf life The final section defines the important sensory criteria and modalities of different food and beverage products including Dairy Meat Confectionary Bakery and Beverage alcoholic and non alcoholic and presents case studies indicating how the methods described in the first two sections have been successfully and innovatively applied to these different foods and beverages The book is written to be of value to new product development researchers working in large corporations SMEs micro small or medium sized enterprises as well as being accessible to the novice starting up their own business The innovative technologies and methods described are less expensive than some more traditional practices and aim to be quick and effective in assisting products to market Sensory testing is critical for new product development optimization ingredient substitution and devising appropriate packaging and shelf life as well as comparing foods or beverages to competitor s products Presents novel and effective sensory based methods for new product development two related fields that are often covered separately Provides accessible useful guidance to the new product developer working in a large multi national food company as well as novices starting up a new business Offers case studies that provide examples of how these methods have been applied to real product development by practitioners in a wide range of organizations Investigates how the application of sensory analysis can improve new product development including packaging optimization

Technology of Reduced Additive Foods Jim Smith, 2008-04-15 Since some food additives have been shown to be harmful to certain individuals a common perception now is that all food additives are potentially dangerous This had led to a large market for products making minimal use of additives Tight regulatory control and labelling requirements provide further impetus for the development of these products This book provides an authoritative and comprehensive review of the industrially important advances in the technology that allow food products to be manufactured with fewer of the additives that have been traditionally used Also many new natural and harmless ingredients and additives are becoming available These are also covered to enable new product concepts to be considered The first edition of this book was widely accepted as a key reference in this subject and this new edition has been thoroughly revised throughout to reflect current trends and practice The chapters on packaging marine derived ingredients animal derived ingredients and reduced additive breadmaking have all been extensively revised and additional authors and co authors have been recruited for the second edition Topics such as active packaging good manufacturing practice HACCP and natural ingredients have been reviewed with regards to their effect on the technology of reduced additive foods
