Fluid Sealing B. Nau, 2012-12-06 With this 13th in the series of International Conferences on Fluid Sealing these meetings move into their third decade To be precise it is now thirty one years since BHRA as it then was convened with no little trepidation the first of these Conferences in Ashford England The massive set of proceedings now occupies a considerable length of shelf in my bookcase and represents a tremendous technological resource over 400 separate papers It is interesting that I seem to refer most often to the earlier volumes probably most of all to the very first Perhaps this is because this volume marks the beginning of historic times AD 0 for fluid sealing technology There were of course important publications in this field even before 1961 A notable example is the seminal work of my predecessor at BHRA Dr D F Denny whose researches on reciprocating fluid power seals The sealing mechanism of flexible packings was published in 1947 by a long since defunct government department the Ministry of Supply Another notable source is the Proceedings of the Institution of Mechanical Engineers 1957 Conference on Lubrication and Wear However there is more to fluid sealing technology than just tribology as we must now call lubrication and wear interest in static seals has really come to the fore in recent years witness the large batch of papers dealing with this subject in the present Conference

Rotodynamic Pump Design R. K. Turton, 1994-01-13 This book provides a brief but thorough account of the basic principles of good pump design It presents the basic hydraulic equations including cavitation and discusses the principles that underlie the correct

performance of centrifugal pumps and axial machines giving two design examples It then outlines analytical methods for flow calculations including special techniques used in computer aided design Shafts bearings seals and drives design for difficult fluids and codes and practices are treated in the last three chapters Lees' Loss Prevention in the Process Industries
Frank Lees,2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world s chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field Fluid Sealing R. K. Flitney,2000-11-02 Leakage and emission control is a critical function in process plant industrial equipment machinery and transportation systems This volume reflects many of the recent advances in sealing technology with topics including tribology static seals and mechanical seals
