Ion Implantation in Diamond, Graphite and Related Materials M.S. Dresselhaus,R. Kalish,2013-03-08 Carbon has always been a unique and intriguing material from a fundamental standpoint and at the same time a material with many technological uses Carbon based materials diamond graphite and their many derivatives have attracted much attention in recent years for many reasons Ion implantation which has proven to be most useful in modifying the near surface properties of many kinds of materials in particular semiconductors has also been applied to carbon based materials This has yielded mainly in the last decade many scientifically interesting and technologically important results Reports on these studies have been published in a wide variety of journals and topical conferences which often have little disciplinary overlap and which often address very different audiences The need for a review to cover in an integrated way the various diverse aspects of the field has become increasingly obvious Such a review should allow the reader to get an overview of the research that has been done thus far to gain an appreciation of the common features in the response of the various carbon to ion impact and to become aware of current research opportunities and unresolved questions waiting to be addressed Realizing this and having ourselves both contributed to the field we decided to write a review paper summarizing the experimental and theoretical status of ion implantation into diamond graphite and related materials **Biomaterials Science** Buddy D. Ratner,Allan S. Hoffman,Frederick J. Schoen,Jack E. Lemons,2012-12-31 The revised edition of this renowned and bestselling title is the most comprehensive single text on all aspects of biomaterials science It provides a balanced insightful approach to both the learning of the science and technology of biomaterials and acts as the key reference for practitioners who are involved in the applications of materials in medicine Over 29 000 copies sold this is the most comprehensive coverage of
