Palliative Care in Critical Care, An Issue of Critical Care Nursing Clinics of North America Tonja Hartjes, 2016-07-22
Intensive care units ICUs provide comprehensive advanced care to patients with serious or life threatening conditions and consequently a significant amount of end of life care EOLC Indeed approximately 20% of deaths in the U S are associated with an ICU stay and nearly half of U S patients who die in hospitals experience an ICU stay during the last 3 days of life Despite the commonality of the ICU experience ICU patients typically suffer from a range of distressing symptoms such as pain fatigue anxiety and dyspnea causing families significant distress on their behalf Thus there is a growing imperative for better provision of palliative care PC in the ICU which may prevent and relieve suffering for patients with life threatening illnesses Effective palliative care is accomplished through aggressive symptom management communication about the patient and family s physical psychosocial and spiritual concerns and aligning treatments with each patient s goals values and preferences PC is also patient centered and uses a multidisciplinary team based approach that can be provided in conjunction with other life sustaining treatments or as a primary treatment approach Failure to align treatment goals with individual and family preferences can create distress for patients families and providers If implemented appropriately palliative care may significantly reduce the health care costs associated with intensive hospital care and help patients avoid the common non person centered treatment that is wasteful distressing and potentially harmful Due to the success of many PC programs administrators providers and accrediting bodies are beginning to understand that palliative care in the ICU is vital to optimal patient outcomes **Motor Maintenance Data Book and Flat-rate Manual** B.
