The Design of High-Efficiency Turbomachinery and Gas Turbines, second edition, with a new preface David

Gordon Wilson, Theodosios Korakianitis, 2014-09-05 The second edition of a comprehensive textbook that introduces turbomachinery and gas turbines through design methods and examples This comprehensive textbook is unique in its design focused approach to turbomachinery and gas turbines It offers students and practicing engineers methods for configuring these machines to perform with the highest possible efficiency Examples and problems are based on the actual design of

turbomachinery and turbines After an introductory chapter that outlines the goals of the book and provides definitions of terms and parts the book offers a brief review of the basic principles of thermodynamics and efficiency definitions The rest of the book is devoted to the analysis and design of real turbomachinery configurations and gas turbines based on a consistent application of thermodynamic theory and a more empirical treatment of fluid dynamics that relies on the extensive use of design charts Topics include turbine power cycles diffusion and diffusers the analysis and design of three dimensional free stream flow and combustion systems and combustion calculations The second edition updates every chapter adding material on subjects that include flow correlations energy transfer in turbomachines and three dimensional design A solutions manual is available for instructors This new MIT Press edition makes a popular text available again with corrections and some updates to a wide audience of students professors and professionals

Annual Catalogue United States Air Force Academy, 1982

United States Air Force Academy United States Air Force Academy, *Aerospace Engineering Education During the First Century of Flight* Barnes Warnock McCormick, Conrad F. Newberry, Eric Jumper, 2004 On 17 December 1903 at Kitty Hawk NC the Wright brothers succeeded in achieving controlled flight in a heavier than air machine This feat was accomplished by them only after meticulous experiments and a study of the work of others before them like Sir George Cayley Otto Lilienthal and Samuel Langley The first evidence of the academic community becoming interested in human flight is found in 1883 when Professor J J Montgomery of Santa Clara College conducted a series of glider tests Seven years later in 1890 Octave Chanute presented a number of lectures to students of Sibley College Cornell University entitled Aerial Navigation This book is a collection of papers solicited from U S universities or institutions with a history of programs in Aerospace Aeronautical engineering There are 69 institutions covered in the 71 chapters This collection of papers represents an authoritative story of the development of educational programs in the nation that were devoted to human flight Most of these programs are still in existence but there are a few papers covering the history of programs that are no longer in operation documented in Part I as well as the rapid expansion of educational programs relating to aeronautical engineering that took place in the 1940s Part II is devoted to the four schools that were pioneers in establishing formal programs Part III describes the activities of the Guggenheim Foundation that spurred much of the development of programs in aeronautical engineering Part IV covers the 48 colleges and universities that were formally established in the mid 1930s to the present The military institutions are grouped together in the Part V and Part VI presents the histories of those programs that evolved from proprietary institutions

How to Make a Spaceship Julian Guthrie, 2017-09-05 A New York Times bestseller The historic race that reawakened the promise of manned spaceflight Winner of the 2016 Eugene E Emme Award for Astronautical Literature A Finalist for the PEN E O Wilson Literary Science Writing Award Alone in a Spartan black cockpit test pilot Mike Melvill rocketed toward space He had eighty seconds to exceed the speed of sound and begin the climb to a target no civilian pilot had ever reached He might not make it back alive If he did he would make history as the

world's first commercial astronaut. The spectacle defied reason: the result of a competition dreamed up by entrepreneur Peter Diamandis whose vision for a new race to space required small teams to do what only the world's largest governments had done before. Peter Diamandis was the son of hardworking immigrants who wanted their science prodigy to make the family proud and become a doctor. But from the age of eight when he watched Apollo 11 land on the Moon, his singular goal was to get to space. When he realized NASA was winding down manned space flight, Diamandis set out on one of the great entrepreneurial adventure stories of our time. If the government wouldn't send him to space, he would create a private space flight industry himself. In the 1990s, this idea was the stuff of science fiction. Undaunted, Diamandis found inspiration in an unlikely place: the golden age of aviation. He discovered that Charles Lindbergh made his transatlantic flight to win a \$25,000 prize. The flight made Lindbergh the most famous man on earth and galvanized the airline industry. Why, Diamandis thought, couldn't the same be done for space flight? The story of the bullet-shaped SpaceShipOne and the other teams in the hunt is an extraordinary tale of making the impossible possible. It is driven by outsized characters: Burt Rutan, Richard Branson, John Carmack, Paul Allen, and obsessive pursuits. In the end, as Diamandis dreamed, the result wasn't just a victory for one team; it was the foundation for a new industry and a new age. Journal of Engineering Education, 1995
